

Progress Done: - Fixed messages content in wrong place issue (so we can now effectively use the prompts feature) - Fixed photos being stretched In Progress: - Tooltips - MacOS for Gerry - Improve caregiver website flow - Auth tokens fix so we can use the weather, good news, and sports news APIs - TLS certificate fix (so we are no longer marked as a sketchy website)	Risks Blockers: - None
Plans Before Accepted Student Open House Saturday 3/28 we aim to finish: - Tooltips - MacOS for Gerry - Improve caregiver website flow - Auth tokens fix so we can use the weather, good news, and sports news APIs - TLS certificate fix (so we are no longer marked as a sketchy website) In addition to these, we anticipate finishing the following before our code freeze: - Creating iPad/iOS version for St. Ann's to test	Needs - Discuss our current progress, publicity opportunities upcoming and our plans for them, as well as transferring ownership/offboarding plans

- Caregiver tutorial content overview (in the form of a thorough help page for now)
- Ability to schedule things at a time other than 8 AM

We acknowledge these features would be nice to have before our code freeze, but they have not been marked a priority and therefore might not be completed before the cutoff:

- Carepartner looking at appointment (appointment in specific - for now can use the prompt feature to include appointment details but will not be formatted in an appointment-specific way)
- Carepartner looking at weather (should be fixed by the auth key fix, but in the event it is not, we will not be prioritizing this)
- Adding images for music album covers
- Starter library
- Carepartner screensaver
- Ability to pull down updates
- Battery alerts, alert service, and other device-specific features
- Carepartner interacting verbally with the application

- Presenting at **Accepted Student Open House 3/28 at 11 AM** and **Imagine RIT 4/25 from 10 AM - 5 PM**
