Abstract

Background: research background.

Objectives: The purpose of the research.

Methods: Research design, participants/sample, sampling technique, data collection technique, research instrument, data analysis technique.

Results: Research results and interpretation of data analysis.

Conclusion: Research findings.

Keywords: first keyword, second keyword, third keyword.

INTRODUCTION

The introduction leads the reader to the main topic. The background or introduction answers why the research or study was carried out (the urgency of the study), what previous researchers did or scientific articles that are currently developing, the novelty of the research (novelty), what is the purpose of writing this article, and what contribution can be conveyed on the results of these findings. [Baskerville Old Face 12pt, justified, 1.5 spaces]

CASE DESCRIPTION

This section should be written clearly in Baskerville Old Face 12pt, justified, 1.5 spaces. The results should be presented in a continuous flow, starting from the main findings to the supporting ones. All units of measurement must adhere to the applicable international system. Diagrams, tables, images, and graphs may be included, accompanied by explanatory narratives.

This section includes: patient demographic description, medical history. Diagnostic assessment, symptoms and signs, treatment or intervention, follow-up and other important detailed results. Ethical approval and consent to participate. [Baskerville 12pt, justified, 1.5 spaces]

DISCUSSION

This section presenting rare or important cases, discussion related to the case. How the results of the case report contribute to the development of science. It should discuss the findings by comparing the current data with those from previous studies, incorporating relevant facts, theories, and opinions. No statistical or mathematical symbols should be included. The discussion should focus on addressing the research hypothesis, highlighting the similarities, differences, or uniqueness of the findings. Reasons behind these findings should be thoroughly explored. The implications of the results should be outlined

to clarify their impact and contributions to the field of study. The section should conclude by acknowledging the limitations of the research.

Case report results are presented in the form of graphs, tables, or descriptive. Analysis and interpretation of these results is required before they are discussed. The table is written in the middle or at the end of each descriptive text of research results/acquisitions. If the width of the table is not enough to be written in half a page, it can be written a full page. Table titles are written from left to right, all words are capitalized, except for conjunctions. If more than one line is written in single space. For example, it can be seen in Table 1.

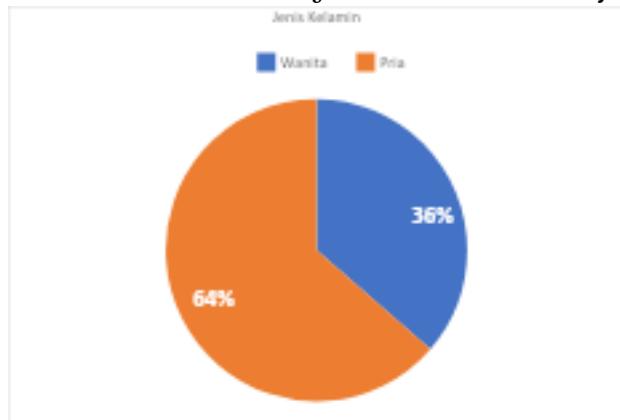

Table 1. The Style and Its Function ← 10 pt

Variable	Male	Female
	Mean ± SD	
.....	1813.6 ± 336.9	1400.3 ± 181.2
.....	1937.0 ± 382.0	1438.0 ± 171.0
.....	4644.0 ± 839.0	2749.0 ± 298
.....	41.1 ± 4.5	25.5 ± 2.9
.....	577.8 ± 31.7	455.2 ± 26.0

Note.

The result is in the form of an image, or data made by drawings/schematics/graphics/diagrams/the like, the presentation also follows the existing rules; The title or name of the image is placed below the image, from the left, and is spaced 1 space apart from the image. If there is more than 1 line, the lines are single-spaced. For example, it can be seen in Figure 1.

Figure 1. Distribution of the injured lower extremity ← 10 pt

CONCLUSION

Conclusions can be generalizing the findings according to the research problem, they can also be recommendations for the next step. [Baskerville Old Face 12pt, justified, 1.5 spaces]

ACKNOWLEDGMENTS

Acknowledgments can be conveyed to those who have assisted in carrying out research activities and funders/sponsors. [Baskerville Old Face 12pt, justified, 1.5 spaces].

CONFLICT OF INTEREST

If the research does not have a conflict of interest with any party, the author can fill in the sentence, "The author hereby declares that this research is free from conflicts of interest with any party". [Baskerville Old Face 12pt, justified, 1.5 spaces].

AUTHOR'S CONTRIBUTION

The author's contribution is the author's role in research activities. The author's contributions include preparing concepts, formulating methods, conducting research, processing results, interpretations, and

conclusions, editing the final version. One author can contribute more than one thing. For example:

Hanief (first author's last name) contributed in preparing concepts, formulating methods, and conducting research. Pratama (second author's last name) contributed in processing the results, interpreting and drawing conclusions. Widiawati (last name of the third author) contributed. [Baskerville Old Face 12pt, justified, 1.5 spaces].

FUNDING/SPONSORSHIP

If this research does not get funding/sponsorship from any party, the author can fill in the sentence, "This research does not receive external funding". [Baskerville Old Face 12pt, justified, 1.5 spaces].

References

Articles are expected to use at least 25 of the most recent primary references. The compilation of citations and bibliography must strictly follow the APA Style (American Psychological Association) 6th Edition. To maintain consistency of reference, citation, and bibliography, we recommend using a Reference Manager application, such as Zotero, Mendeley, or other paid applications. Written in single space, the bibliography is spaced 1 space. The following is an example of writing a bibliography according to APA 7th Edition.
