<https://pcornet.imeetcentral.com/drnoc-workgroups/folder/WzlwLDcyNTA1NTJd/>
    - ii. Checking LOINC codes whether lab observations or Obs Clin observations.

- iii. Try to generate length of stay ( LOS) in long data curation output. They use DC date - Admit Date + 1. They are calculating LOS differently than Alex's organization. CCurrently admitted patients has no LOS, but ?
  - iv. Run time about the same as previous CDM versions.
  - v. Mark Crooks: same on LOS: Had errors on Outpatient Surgery that extended over 1 day. Found Obs Clin LOINC codes in Lab Table. Alex: generally manually curates their LOINC codes in their CDM. **Alex will send a list of the LOINC codes they use (with no warranty of fitness...)**. Reid ran the Code Errors script; added those showing as Not-Lab were added to the Obs\_clin table. Has iterated this solution. Documentation says can add text description of a measurement if no LOINC code: should be in the specs
