List tl	he	me	tall	oid	s.													

Part 3: Families of Elements	
The element hydrogen should not be colored. It stands upart from the rest of the elements because its propertie	s

Use the Periodic Table in your textbook or other resource to shade the boxes in the blank table of elements. (See colors on the board.) Color the key below.

Key: Element Families Alkali metals

Alkaline earth metals

Transition metals

Boron family

Carbon family

Nitrogen family

Oxygen family

Halogens

Noble gases

Lanthanides

Actinides

Rows of the periodic table are called _____

abundant element in the universe and is highly reactive.

How many periods are on the table? _____

do no match any other single group. It's the most

Columns of the periodic table are called ______.
