

This is what my Google Form looks like. If your students have access to devices, having them complete a form like this is a quick and easy way to collect the data. You will have to create your own form, but it literally takes 1 minute!

The form features a header image with a light blue background and numerous blue, spherical virus-like particles of varying sizes. Below the image is a white title box with a blue border. The title "Virus Simulation" is in a large, bold, black font. Below the title is a blue instruction box with white text. The form contains two required text input fields, each with a blue label and a red asterisk, followed by a light blue "Your answer" input line.

Virus Simulation

Please complete this form so that the class has accurate data from our simulation.
