

Second Grade e-Learning Schedule

Science 5/11-5/15

Tuesday 5/12	Essential Question: What does biodiversity mean? How can we tell if an ecosystem has healthy biodiversity? We learned that an ecosystem is how living and non-living things interact. We also learned that there are many different types of ecosystems--<i>oceans, forests, arctic tundra, rainforests, lakes</i>. In these ecosystems there are many different types of living and non-living things. Today we are going to explore how healthy ecosystems are by looking at how many different plants and animals live there. <u>Google Classroom Assignment:</u> 1) Review the Google Slide Presentation (click here) 2) Complete page 1 and 2 in the Jamboard
Friday 5/15	Essential Question: What are plants? Today we are going to explore what a plant is and how it is different from other living and non-living things. Plants are very important to ecosystems. They need certain things to survive as well. Today you will watch a Discovery Ed video about plants. What did you learn? 1) Watch the Discovery Ed Video (please log into classlink and Discovery ed first) 2) Complete the Plants Can, Have, Are activity in Google Classroom
