

Northern Rough-winged Swallows arrive in Spring. They are almost always lower in numbers and smaller than the Tree Swallows, Purple Martins, and Barn Swallows. However, they are slightly larger than Bank Swallows, but lack the breast band. Upperparts are brown. The brown face fades to a light brown on the throat and breast, with the rest of the underparts a dingy white. They nest in single pairs in stream banks, cliffs, under bridges, and culverts.

A total of 134 avian species (+ 2 sp.) was recorded this month, ranking this month as the 11th highest May among 27 years of records. May 2020, with 163 species, remain as the highest May, while May 1998 with only 70 species is the lowest. This total is 5 species more than last month and 7 less than May 2023.

Listed below, following the species' names, are the date(s) of sighting(s), plus the occasional miscellaneous information regarding numbers, gender (♂=male, ♀=female), age (im=immature, ju=juvenile, bp=breeding plumage, ad=adult, sa=sub-adult, nb=non-breeding, gos=goslings, duck=ducklings, f=fawn), color phase (b=blue, w=white), and location (BY=back yard, FY=front yard). The order follows the 64th Supplement (2023) to the American Ornithological Society's *Check-list of North American Birds* and the 23rd Supplement to the 7th Edition (1998).
