SKILLS React, Redux, HTML, CSS, Python, JavaScript, Python, SQL, Express, Flask, PostgreSQL, Sequelize, SQL Alchemy, Docker

EXPERIENCE

Gubagoo

February 2022 – Present

Software Engineer

- Spearheaded the development of Single Sign-On (SSO) capability using React and TypeScript, seamlessly integrating Okta. Ensured system robustness through Jest testing.
- Overhauled and unified the UI for “Dashboard 2.0” and "Project Burgundy", introducing advanced data visualizations, including metrics, radial charts, and trend data. Due to the success in one app, was entrusted to implement in another.
- Rapidly engineered a chat toolbar for the NADA conference and refined the VR deals page for more direct and efficient customer interactions.
- Employed ReactJS and PHP in tandem to design a comprehensive password reset feature, embedding vital security checks such as email verification, token expiration, and password complexity. Demonstrated rapid adaptability by mastering PHP specifically for this project.
- Transformed the Chat Console History from infinite scroll to modular pagination, and subsequently integrated this pagination into other app areas.
- Integrated an AI feature, Copilot, empowering users to allow AI to collect customer PII. This involved the creation of a new Redux slice, module enhancement, and refined socket interactions. Ensured system robustness through enzyme testing
- Leveraged web sockets to introduce a typing indicator for operators in consumer-facing applications, significantly enhancing user experience and engagement.
- Championed the 'dark mode' initiative, utilizing power shell scripts to transition all colors in SASS files and styled components to variables, ensuring the entire app supported a dark mode that can be toggled on and off seamlessly.
- Seamlessly incorporated Storybook into Chat Console, paving the way for structured component testing and development.

iland Cloud

Strategic Software Consultant – TOLA

September 2017 – October 2020

- Led onboarding and strategy development for high-tech SaaS products, enhancing customer growth and risk mitigation.

PROJECTS

Coina (JavaScript, Python, ReactJS, Flask, SQL Alchemy)

[github](#)

- Developed a Q&A cryptocurrency forum with social features, upvote mechanisms, and AWS S3 image integration.

To The Moon (JavaScript, Python, ReactJS, Flask, SQL Alchemy)

[github](#)

- Crafted a stock trading simulation app with dynamic price charts and integrated APIs for stock data and news.

Remember the CRUD (JavaScript, Express, Sequelize, NodeJS)

[github](#)

- Replicated "Remember the Milk", a task management app, enabling users to perform CRUD operations seamlessly using only vanilla JavaScript on the frontend and NodeJS/Express/Sequelize on the backend.

EDUCATION

BA Finance - University of Houston | 2016

Web Development - App Academy | 2021
