

I have a custom built gaming computer. It's very powerful and can play every current game available including Crysis 2, Deus Ex Human Revolution, Skyrim V Elder Scrolls, Every Call Of Duty game, etc. Here are the specs and what's included. I will include a FRESH INSTALL of Windows 7 SP1 64-bit OS, Microsoft Office 2010 Professional and Microsoft Forefront (enterprise level) anti-virus. I am removing the 1TB hard drive, but leaving the SSD drive and the 2 500GB drives listed below. You can test the system with the games I have installed if you want, but they will be removed when I remove my hard drive. My price is negotiable but only if you don't want the keyboard/mouse/printer/LCD Monitor/etc. **I want \$350 for the tower with nothing else in case that's all you are interested in.**

The rear fans need to be plugged into the power supply because the motherboard shuts them down on start-up and throws a fan code (seen on the screen), but after that code they run at all times. The fans are 120mm and have Blue LED's so they take more power then the motherboard wants to give them on start-up. This doesn't cause any issues other then the warning on boot.
