Qualitative Analysis

We are now setup to develop conduct a [bi-variate analysis](#).

1. What test do we use? T test assuming equal variances (Teachers often compare 2 groups).
2. Why do we use it? Easy, I made you. It works good for ed group comparisons that you could do in your work. Special ed/ regular ed, last years class vs. this years class, between instructors sections of the same class, Get it.
3. How do we do the test? You have to have Excel (analysis data pack installed) some other statistical software such as SPSS.
4. How do we interpret the results? How big is your p value, what confidence level did you test it at?
