Alt text for images and charts

Why alt text is important

- From [Harvard's Digital Accessibility Office](#): "Alternative (Alt) Text is meant to convey the “why” of the image [or chart] as it relates to the content of a document or webpage. It is read aloud to users by screen reader software, and it is indexed by search engines."
- Alt text is also valuable because when image files go missing or get corrupted and the image is no longer visible on the page,, alt text also provides info for all readers on the important content of the missing image.
- As this guidance suggests, alt text will be specific to the purpose the image/chart serves in your article: what about it is important for your purposes? This means that your alt text is interpretive, drawing readers' attention to particular aspects or interpretations of the image/chart and not others. In the examples below, the features of the images/charts that the alt text highlights are specific to what the author wants them to show readers.
- *Note about how much detail to include in alt text for charts:* if you describe the information represented in a chart in the text of the article (e.g. the campus stakeholders

listed and their rates of frequency in the example below), you don't need to repeat this information in the alt text since readers will already get it from the paragraph text.

(9.17%, e.g., Banner, Courseleaf, or homemade applications/databases), and instructors (30.83%). The breakdown of these stakeholders across each university appeared to be fairly idiosyncratic; the only significant relationship was that if office administrators are involved in course scheduling, upper administrators are also more likely to be involved ($r=.20$, $p=.033$).

Figure 1: Rates of stakeholder involvement in course scheduling and classroom placement
 Alt text: A bar chart showing how frequently different campus stakeholders are involved in course and classroom scheduling.

What is the course scheduling process?

Alt text 62.2% of respondents reported that the decision flow for course scheduling started in the program/department, 18.4% reported that the process was an equal collaboration between the department and an outside office, and 19.4% reported that the process was started outside of the

How to add alt text in Microsoft Word

See instructions provided by Microsoft [here](#)

Notes: Please do not use the following options in Word's alt text wizard:

- Mark the image/chart as decorative
- Use the "generate a description for me" option

Transcripts/captions for video and audio files

Why transcribing/captioning is important

- Transcripts/captions make video and audio content accessible to deaf and hearing-impaired audiences, as well as to anyone who doesn't have the ability to listen to audio while reading an article (for example, users of devices without speakers, users without headphones, etc.).
- Transcribing vs. captioning: Transcription focuses on the spoken content of the file, while captioning also includes information about non-verbal noises and sounds. Captioning is necessary to convey the meaning of an audio/video file if things like background sounds, hesitations, changes in pitch or person being addressed, and other non-verbal aspects are essential to understanding the meaning of the file in your use case. Transcription may be sufficient if the significance of the audio/video content comes from its verbal content and does not rely on other sounds.
- The choice to caption vs. transcribe, and what information to include in captions, are interpretive decisions, shaped by your understanding of the audio/video artifact and the way you're using it in your article.

Free transcription tools:

You can transcribe/caption using just a media player and a word processing document, playing the file, pausing, typing, restarting, etc. However, captioning this way can be very time consuming and difficult because of the need to stop and start, toggle between programs, rewind to catch missed words, etc. Below are some free tools you can use to generate transcripts (not captions) automatically, which you can revise to correct mis-recognized words, add punctuation, add speaker names, add non-verbal cues and sounds (as necessary), etc.

Soundwriting Pedagogies

Edited by Courtney S. Danforth, Kyle D. Stedman, & Michael J. Faris

The availability of digital tools has made it easier than ever to record and edit sound, and teachers of composition have noticed. We record sonic texts for our students, and we give aural assignments in many genres: audio essays, podcasts, sonic remediations, interviews, radio shows, think-alouds, experimental pieces, and much more. We're entering an age of soundwriting, where the affordances of sound intersect the pedagogies and practices of writing and rhetoric.

In the chapters that follow, you will find theories, examples, and lots of audio to encourage the use and value of soundwriting in composition, writing, rhetoric, and communications classrooms. Crank it up.

Preface

00:00 14:00

Show/Hide Preface Transcript

[cool "Soundwriting Pedagogies" swooshy sonic title plays]

Courtney [to audience]: Hello and welcome to *Soundwriting Pedagogies*. I'm Courtney Danforth,

Kyle: I'm Kyle Stedman,

Michael: and I'm Michael Faris. You're listening to the preface of our edited collection.

Kyle: There's a lot going on right now with sound in rhetoric and composition studies. This book zeros in on one specific aspect of that groundswell of interest: using sound in writing studies pedagogy.

Michael: This collection presents an overview of issues and practices in an attempt to build the community of soundwriting pedagogues, encouraging readers...

Courtney [to Michael]: Hey Michael, I think that should be "listeners" instead of "readers," right?

Michael [to audience]: ... encouraging you *listeners* to jump in.

Courtney: If you have never read a scholarly edited collection with your ears before, and who has?

Kyle: I haven't.

Michael: Me neither.

[Crowd says it's never heard scholarship before either.]

Interview Videos

Interspersed throughout the text are a series of interview videos. To provide easy access to them together, we compiled all of them on this page in the order they appear in the text. Video titles are in the upper left-hand corner.

Introduction

00:00:00.02 → 00:00:44.00

Gail Hawisher: Our first authored book I just had to bring it, to hold it up and show it to you Jen. Computers and the teaching of writing an American higher education 1979-1994. It is with Charlie Moran as you know and Paul LeBlanc. One quick story with this is Cindy said I really want to do this book. She said do you think we could have it sort of gold blue? So anyway, this was her conception of a design which we wanted it to look very serious.

00:00:45.00 → 00:01:52.00

Paul Leblanc: It is easy to forget that there was a real sense of promise and wow so it changed things and there was a lot of this opportunity and youthful energy about it and of course one is always nostalgic for one's own youth so for those two things to come sliding in at the same time was great. And then there was this amazing, wonderful sense of colleagues and unlike the full time tenured faculty we dealt with like Cindy Self, Gail Hawisher and Hugh Burns, they were great and they made us feel like colleagues. We felt like we were all forging, well we were, at the time it was a new field. That is a pretty heady and wonderful feeling and I think we were riding the technology wave before much and maybe even most of the higher ed. So when you think about the disciplines in the academy that first embraced networking and PC's, it was writing almost before every other field.

00:01:53.00 → 00:03:10.00

Charles Moran: I think computers and composition started at least my sense of it by people like Cindy and Gail who were in the field of composition but very much excited about what technology could do to improve the teaching and writing. So there had been this libertarian, liberal push from the beginning coming from Gail and Cindy and the people who joined that happy crowd and I think all of us were still part of the composition network but saw that something was going to be happening and if we could somehow get on top of it and direct it and use computers to help writers write as opposed to counting their spelling errors that maybe we could effect the way writing was going to be taught in this new era.
