Portofolio

The first project I'm working on is the analysis of Covid data. I do the analysis from start of Covid which is febuary 2020 until right now (febuary 2022). The data is taken from the official website (https://ourworldindata.org/covid-deaths)

The first thing I do is download the data and make it into excel format to make it easier to analyze. All the data that is use can be found here: https://drive.google.com/drive/folders/1phHlFs9W6Ed_XmXsp8LN9U3HheJ0ZgdP?usp=sharing

First I separate the covid data into 2 excel which is covid death and covid vaccination to make it easier to analyze. After that I import the excel to the microsoft sql to query. The result of my query can be found here: https://github.com/Dkrosch/PortofolioProject/tree/main

After doing all the query then I use the tableau for data visualization. The result of my tableau visualization can be found here: https://public.tableau.com/views/CovidDashboard_16441749333690/Dashboard1?:language=en-US&:display_count=n&:origin=viz_share_link
