Track Record Article	Abstract
Submitted:	<i>The coronavirus attacks the human respiratory tract. A person can get infected by a Covid-19 patient. The disease can spread through small droplets from the nose or mouth when coughing or sneezing. Transmission of the COVID-19 virus has two main ways, namely through respiratory droplets and contact. Respiratory droplets are produced when a person coughs or sneezes. Everyone in close contact (within a 1 m radius) with a person showing symptoms of respiratory distress (coughing, sneezing) is at risk of being exposed to respiratory droplets that may cause infection. Droplets can also fall onto surfaces where the virus remains active. A total of 93% of Medan city residents have implemented mask-wearing behavior. Seventeen respondents (56.7%) use a hand sanitizer constantly, 15 respondents (29.4%) use a hand sanitizer sometimes, and 28 respondents (54.9%) never use a hand sanitizer. According to the data shown in table 4 above, seven respondents (90%) always use physical separation, compared to one respondent (10%) who never does so. During the COVID-19 pandemic, we aim to continue to increase our body's immune system and maintain personal hygiene to avoid various diseases and the Covid-19 virus. We also hope for constructive criticism and suggestions from our friends so that the article we have created meets expectations and is useful for all of us</i>

INTRODUCTION (12pt, all caps, Cambria, Bold, 1,5 space)

Beginning in 2020, the globe was horrified by the emergence of a novel coronavirus (SARS-CoV-2) that caused the Coronavirus illness 2019 pandemic (COVID-19). It is known that this virus originated in Wuhan, China (Asfar, 2021). It was found near the end of December 2019. The covid-19 virus is deadly because of its quick and easier transmission compared to the 2003 SARS pandemic that swept the globe. (Quoted from *Financial Times*). Coronavirus infects the respiratory tract of humans. One may get infected by a Covid-19 sufferer **(11pt, Cambria, normal, 1,15 space)** maximum Introduction 2 pages.

METHODS (12pt, all caps, Cambria, Bold, 1,5 space)

This study is a quantitative research using descriptive analysis with a cross-sectional design. Collecting data included acquiring original data. People in Neighborhood X, Teladan Timur Urban Village, Medan City, North Sumatra, were asked to complete online surveys through Google Forms to obtain primary data. This study's tool was a questionnaire on demographic information and community behavior addressing the prevention of COVID-19 transmission (11pt, Cambria, normal, 1,15 space) maximum Introduction 2 pages.

RESULTS (12pt, all caps, Cambria, Bold, 1,5 space)

Table 1 Characteristics of Respondents (n=51) (11pt, Cambria, Bold, Center, 1 space)

Object	Font	Alignment	Space	Space above	Space below
Judul	12pt bold	centered	1	0pt	0pt
Authors	11pt bold	centered	1	0pt	0pt
Alamat	11pt bold	centered	1	0pt	0pt
Level 1	11pt bold	left	1	0pt	0pt
Level 2	11pt bold	left	1	0pt	0pt
Level3	11pt bold	left	1	0pt	0pt

to table 1, most respondents were female, with 30 female respondents (58.8%) compared to 21 male respondents (41.2%). As many as ten respondents in the age group 17-25 years (19.6%), as many as eight respondents in the age group 26-35 years (15.7%), as many as 13 respondents in the age group 36-45 years (25.5%), as many as 15 respondents in the age group 46-55 years (29.4%), as many as four respondents in the age group 56-65 years (7.8%), and as many as one respondents in the age group over 65 years (2.0%). (12pt, Cambria, normal, 1 space) maximum Results 5 pages.

Figure/Graphic/Illustration

The title of the picture is sorted from the beginning of number 1 onwards. More detailed advice on the use of images is as follows:

- Make sure that the numbers are clear and can be read with printed letters.
- Black and white or colour images are allowed but must submit the original file if the writing changes the image is not broken / damaged due to different resolutions.
- Figures must be neatly centred in the column. If a figure covers two columns, it should be placed at the top or bottom of the column.
- Tables, Figures, and Illustrations should also be arranged attached separately. An explanation/note should be provided for each illustration, with all notes typed on a separate sheet of paper. Photographs should be printed on glossy paper.

- Copies of illustrations should, preferably, be scanned and included in the electronic version of the submission in the following appropriate formats:

- BMP - Microsoft bitmap file
- WMF - Windows Metafile Format
- EPS - Encapsulated Postscript
- JPEG/TIFF format

(one single space, 11pt font)

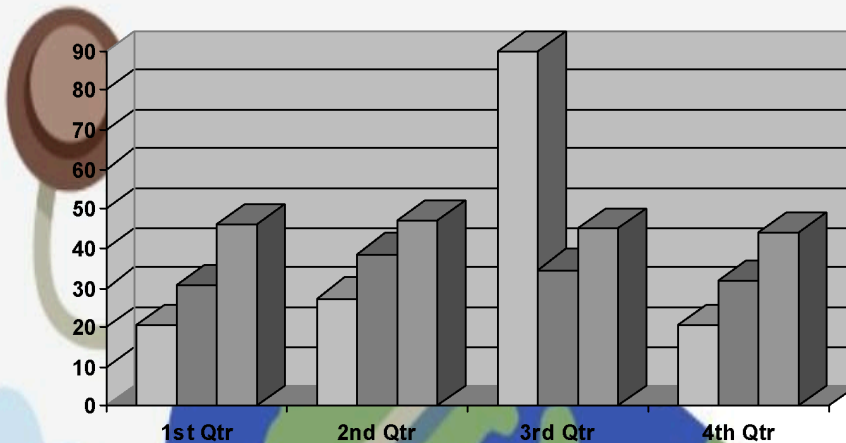

Figure 1. Figure/Graphic/Illustration

Formulas

Equations should be numbered in brackets as shown in Equation (1) and neatly centred in paragraphs. Equations should be prepared using MS Equation Editor (not in image format). The number of equations is to be placed on the extreme right side

$$\int_0^{r_2} F(r, \varphi) dr d\varphi = [\sigma r_2 / (2\mu_0)] \cdot \int_0^\infty \exp(-\lambda |z_j - z_i|) \lambda^{-1} J_1(\lambda r_2) J_0(\lambda r_i) d\lambda. \quad (1)$$

DISCUSSION (12pt, all caps, Cambria, Bold, 1,5 space)

The COVID-19 virus is transmitted mostly by splashing (respiratory) and contact droplets. A person generates respiratory droplets when they cough or sneezes. Anyone who comes into close contact (within 1 m) with a person exhibiting respiratory distress (coughing, sneezing) is at risk of exposure to infectious respiratory droplets (Wiranti et al., 2020); (Hayati, 2022). (11pt, Cambria, normal, 1,15 space) maximum Discuss 5 pages

CONCLUSIONS (12pt, all caps, Cambria, Bold, 1,5 space)

The pandemic of Covid-19 necessitates that every community adopts preventative measures to minimize the spread of this illness. Seventy to eighty percent of Medan's population use the habit of preserving cleanliness by washing objects before or after usage.

Articles that are not prepared according to these guidelines and manuscripts with too many errors will be rejected by the Editor. Accepted articles will be reviewed by peer reviewers and edited by the Editor. Authors must follow the article submission procedure on OJS.

REFERENCE (12pt, all caps, Cambria, Bold, 1,15 space)

All publications cited in the text should be included as a reference list. Each manuscript must contain at least 25 primary references from journal articles over the last 5 years. The Reference List numbers are sequential as they appear in the text. These should be numbered in the order in which they are mentioned in the text. Use "APA Style Version 6" from 2010.

Reference list recommendations are mandatory using a help application such as Mendeley.

Reference:

- All authors must be listed, unless there are more than six authors. End with et al. if Indonesian and et al. if English after the sixth author.
- The reference list in the article uses Arabic numbers in superscript format such as "...Epstein et al.¹... sequentially.
- Accepted but unpublished articles can be included in the reference list; write the journal to which it is addressed and add "To be published".
- Avoid citing "personal opinion" unless you provide important information that is not publicly available, name the person and date of communication, obtain written permission and confirm the accuracy of the data from the source of the personal opinion.
- Examples of references are as follows:
 - ⌘ For books, book improvements, monographs.¹
 - ⌘ For journal articles.²
 - ⌘ For magazine articles.⁴
 - ⌘ For proceedings articles.⁵
 - ⌘ For University Engineering Reports.⁶
 - ⌘ For Dissertation or Thesis.⁷
 - ⌘ For References from the internet.⁸

When preparing the reference list, avoid the following:

- Listing references that are not cited in the text
- Excessively citing the author's own articles.
- Referencing other people's work incompletely.

It is strongly recommended that authors include the DOI number for each reference. The reference list should be consistent, either in the long name of the journal or the short name of the journal. (e.g. Bull. Chem. React. Eng. Catal.) or long name (Bulletin of Chemical Reaction Engineering & Catalysis).
