KUNG FU MATHS
3RD DAN INFO SHEET

Simplifying Fractions

You will have 4 mins to answer 20 questions

You will need to simplify fractions into their most simple form. For example, the fraction 4/8 should be simplified to ½ and 10/15 should be simplified to ⅔. Simplifying fractions will help you later when you need to add fractions with different denominators and convert fractions to percentages.

You should get someone at home to help you. This video will help you learn and understand:
