

Update Log

Beta Versions

- v0.0.1b
 - website development begins
 - added simple “under construction” text
- v0.1b
 - added simple repeating background
 - added image to accompany text
 - added welcome text on top of page
 - added “the ding button”
- v0.1.1b
 - fixed a bug that made the ‘ding’ sound effect both load and play on click, which caused it to play the sound completely instead of repeatedly playing upon click
 - added image source link for image
 - added background music
- v0.1.2b
 - refactored code to fix major bugs
 - added global ‘ding’ counter
 - changed version indicator to be below the welcome text
 - fixed an issue with the background music not automatically playing and/or looping (as a result of some browsers not allowing it due to it being mainly used by websites that spam advertisements, etc.) via a “click me to load” button that *should* meet this condition upon click
 - added favicon
- v0.1.3b
 - cleaned up and moved code into separate files
 - fixed an issue with the *current version* bubble in which it got stuck at the far left of the screen
- v0.1.4b
 - applied an animated rainbow gradient to the welcome text (this *should* work on all web browsers, though will be worked on a bit further since the animation isn’t 100% smooth)
 - changed background to *stars3.gif*
 - cleaned up HTML and CSS code
