

Below is a list of keyboards that the Fraktal Kaps Small Artisan Resin Knob are confirmed to fit on and work with!

These knobs fit any standard 6mm D-shaft encoder or potentiometer, and the diameter of them is the same size as the base width/height of a standard MX-style keycap (18mm). This means that if your keyboard supports adding an encoder in place of an MX switch, this knob will fit!

If you have a keyboard that isn't on this list, and want to know if the artisan knob will fit, please reference the dimensions [here](#), or reach out to me on Discord (HOB13CAT#5367). Also, if you have one of these knobs on a keyboard that isn't on this list, please let me know so I can add it!
