Abstract. Abstract should be prepared in English, single spacing and do not exceed 250 words. Abstract should state (a) the objectives of the research, (b) basic procedures in the research, (c) results and discussion, and (d) principal conclusions. Abstract should stand alone, meaning no citation in abstract. The abstract includes the introduction, objective of the papers,

method, results and discussion, and conclusion including novelty of the research. The abstract should be italics. (Heiti SC10)

¶ single-spaced

Keywords: (3 - 5 keywords separated by semicolon(;), should be italics, sentence case, alphabetical order) (Heiti SC10)

Please be mindful of the SDGs' (Sustainable Development Goals) keywords. (SDGs references:

¶ single-spaced

Introduction (Heiti SC12)

¶ single-spaced

Use Heiti SC 12 only throughout unless stated otherwise. Do not indent the first line of paragraph following a heading or subheading. Use single spacing for the main document. Note that there is only one space between sentences. Authors should state the objectives of the work at the end of the introduction section. Before the objective, authors should provide an adequate background, and literature review in order to record the existing solutions/method, to show which is the best of

previous research, to show the main limitation of the previous research, to show what do you hope to achieve (to solve the limitation), and to show the scientific merit or novelties of the paper. Introduction must include literature review which provides a critical analysis and summary of existing research on a particular topic or subject. It involves an in-depth examination and evaluation of academic articles, books, and other published materials related to the chosen topic. It also accommodates a review of previous studies to provide a context for the current study and to identify any gaps or limitations in existing research.

Indent 5 spaces subsequent paragraphs. Indent 5 spaces subsequent paragraphs. Indent 5 spaces subsequent paragraphs. Indent 5 spaces subsequent paragraphs.

When quotations run into more than 40 words, indent as shown here. Use Heiti SC 10 as font size. When quotations run into more than 40 words indent as shown here, use Heiti SC 10 as font size.

When quotations run into more than 40 words indent as shown here, use Heiti SC 10 as font size.

Do not use numbers or alphabets in headings and subheadings (*Example A. Introduction 1. Body*). Use the following style for headings and subheadings.

¶ single-spaced

USE THIS STYLE FOR SUB HEADING 1 OF INTRODUCTION (Heiti SC10)

¶ double-spaced

Materials (if any) and Methodology (Heiti SC12)

¶ single-spaced

Methodology refers to the set of principles, procedures, and techniques that are used to conduct research and to gather and analyze data. It includes the overall approach to the study, as well as the specific methods and techniques used to collect and analyze data. It also provides a research project that typically includes a detailed description of the research design, sampling procedures, data collection methods, and data analysis techniques. It should be designed to address the research questions or hypotheses and to provide reliable and valid results.

¶ double-spaced

Results and Discussion (Heiti SC12)

¶ single-spaced

Results should be clear and concise. The results should summarize (scientific) findings. Please highlight differences between your result and the previous publications by other researchers.

The discussion should explore the significance of the result of the work, not repeat them. Make the discussion corresponding to the result, but do not reiterate the result. It should begin with a brief summary of the main scientific findings (not experimental results).

¶ single-spaced

USE THIS STYLE FOR SUB HEADING 1 OF INTRODUCTION (HEITI SC10, align left)

¶ double-spaced

Conclusion and Recommendation (Heiti SC12)

¶ single-spaced

Conclusion should answer the objectives of research. Tells how your work advances the field from the present state of knowledge. Do not repeat the Abstract, or just list experimental results. Provide a clear scientific justification for your work and indicate possible applications and extensions. You should also suggest future experiments and/or point out those that are underway.

Recommendation is suggestion or proposal for actions that can be taken based on the findings of a study or research project. It intends to inform decision-making and guide future research or practices as well as to consider the implications of the findings for relevant stakeholders. It should be specific, actionable, and feasible, taking into account any limitations or constraints.

¶ double-spaced

Acknowledgements (Heiti SC10)

¶ single-spaced

Place any acknowledgement here. For example, this work was supported by the Research Fund provided by xxxxxxxxxx.

Avoid identifying any of the authors prior to the review. Replace instances where the name of authors appears with 'author'.

¶ double-spaced

References (Heiti SC10)

¶ single-spaced

References are sorted alphabetically within single spacing. References used by each author are at least 20 references. The sources cited should at least 80% come from those published in the last 10 years. The sources cited are primary sources in the forms of scientific journal articles, books, and research reports, including theses and dissertations. Citations from journals should be at least 80% of the total references cited. Finally, quotations and references follow the 7th edition of the "APA" style. All references referred to in the article must be written in this section and everything written in the reference list must be referred to in the article. Here are some reference examples:
