

Recommendation as of January 2022

- Harry Kaplanian
- Kristin Martin
- Steffen Koehler
- Mike Gorrell

1) Revisit the idea of LTS at the end of calendar 2022

2) Definitions

- a) Current active release - the one the community is actively working on. Not officially released for production use. Still being developed - e.g. Lotus
- b) Most recent Release - e.g. Kiwi
- c) 3rd Release - not the current active release and not the most recent release - the one after that. E.g. Juniper

3) Until we've decided on an LTS, we should commit to addressing issues in the current release and past releases according to:

a) FUNCTIONAL

i) P1 -

- (1) current active release - e.g. Lotus
- (2) Most recent release - e.g. Kiwi

ii) P2 -

- (1) Current active release - e.g. Lotus

b) SECURITY

i) P1 -

- (1) Current active release - Lotus
- (2) Most recent release - Kiwi
- (3) Based on the issue, open to 3rd release e.g. Juniper

ii) P2 -

- (1) Current active release - Lotus
- (2) Based on the issue and where we are in the current active release, perhaps the most recent release as well

4) Accept that some exceptional issue might arise where these guidelines are not followed
