ABSTRACT

A single paragraph of about **150-200** words maximum. For research articles, abstracts should give a pertinent overview of the work. **Introduction:** Place the background of the study. **Objective:**. **Methods:** briefly describe the main methods or implementation applied. **Results:** summarize the article's main findings. **Conclusions:** indicate the main conclusions or interpretations. The abstract should be an objective representation of the article and it must not contain results that are not presented and substantiated in the main text and should not exaggerate the main conclusions.

Keywords: keyword 1; keyword 2; keyword 3 (List three to five pertinent keywords specific to the article)

INTRODUCTION

The introduction should briefly place the study in a broad context and highlight why it is important. It should define the purpose of the work and its significance. The current state of the research field should be carefully reviewed, and key publications cited. Please highlight controversial and diverging hypotheses when necessary. Finally, briefly mention the main aim of the work and highlight the principal conclusions. As far as possible, please keep the introduction comprehensible to scientists outside your field of research. References should be numbered in order of appearance and indicated by a numeral or numerals in square brackets—e.g., [1] or [2,3], or [4–6]. See the end of the document for further details on references.

METHODS

The Materials and Methods should be described with sufficient details to allow others to replicate and build on the published results. Please note that the publication of your manuscript implicates that you must make all materials, data, computer code, and protocols associated with the publication available to readers. Please disclose at the submission stage any restrictions on the availability of materials or information. New methods and protocols should be described in detail while well-established methods can be briefly described and appropriately cited.

Research manuscripts reporting large datasets that are deposited in a publicly available database should specify where the data have been deposited and provide the relevant accession numbers. If the accession numbers have not yet been obtained at the time of submission, please state that they will be provided during review. They must be provided prior to publication.

Interventionary studies involving animals or humans, and other studies that require ethical approval, must list the authority that provided approval and the corresponding ethical approval code.

RESULTS

This section may be divided by subheadings. It should provide a concise and precise description of the experimental results, their interpretation, as well as the experimental conclusions that can be drawn.

Subsection

*All figures and tables should be cited in the main text as Figure 1, Table 1, etc.

Figure 1. Figure title: followed by the reference.

DISCUSSION

Authors should discuss the results and how they can be interpreted from the perspective of previous studies and of the working hypotheses. The findings and their implications should be discussed in the broadest context possible. Future research directions may also be highlighted.

LIMITATION

This section is mandatory for the research paper.

CONCLUSION

This section is mandatory for both research papers and case studies.

ORCID

In this section, author(s) should provide his/her ORCID ID if applicable.

ACKNOWLEDGMENTS

Firstname (abbreviated). Lastname et al.
(*ex: F. Lastname et al.*)

In this section, you can acknowledge any support given which is not covered by the author contribution or funding sections. This may include administrative and technical support, or donations in kind (e.g., materials used for experiments).

FUNDING

This section shall describe the funding of the research, if any.

CONFLICTS OF INTEREST

Declare conflicts of interest or state “The authors declare no conflict of interest.” Authors must identify and declare any personal circumstances or interest that may be perceived as inappropriately influencing the representation or interpretation of reported research results. Any role of the funders in the design of the study; in the collection, analyses, or interpretation of data; in the writing of the manuscript; or in the decision to publish the results must be declared in this section. If there is no role, please state “The funders had no role in the design of the study; in the collection, analyses, or interpretation of data; in the writing of the manuscript; or in the decision to publish the results”.

ETHICAL APPROVAL

The statement of ethical approval, approval number, approval date, and waiver date should be described in the Method section. Especially when the Ethical Committee or Institutional Review Boards (IRBs) waives the ethical approval, the certification document should be added as a supplementary document.

APPENDIX A

The appendix is an optional section that can contain details and data supplemental to the main text—for example, explanations of experimental details that would disrupt the flow of the main text but nonetheless remain crucial to understanding and reproducing the research shown; figures of replicates for experiments of which representative data is shown in the main text can be added here if brief, or as Supplementary data. Mathematical proofs of results not central to the paper can be added as an appendix.

APPENDIX B

All appendix sections must be cited in the main text. In the appendices, Figures, Tables, etc. should be labeled starting with “A”—e.g., Figure A1, Figure A2, etc.

Note:

1. References must be numbered in order of appearance in the text (including citations in tables and legends) and listed individually at the end of the manuscript with the

Firstname (abbreviated). Lastname et al.
(ex: F. Lastname et al.)

Vancouver style. Authors should preparing the references with a bibliography software package, such as EndNote, ReferenceManager or Zotero to avoid typing mistakes and duplicated references. Include the digital object identifier (DOI) for all references where available.

2. Maximum number for each figure is **180** words and the number of words in a table shall be counted within **3.500** words
3. The similarity score for plagiarism check is suggested under **20%**.
4. Maximum number of words for manuscripts is **4.000-6.000** words, and the number of words in **tables** will be deduced from the total words up to 6,000.
