Paper Outline

This paper begins with a discussion of the state of affairs in modern Systems Engineering and how the challenges there motivate calls for Model Management solutions. See "[Motivation Section](#)". The paper then proposes several ideal capabilities that, if available, would advance the state of the art in the management of models. See "[Ideal Capabilities Section](#)". With an understanding of the problems and with a vision of the solutions, the paper presents a collection of requirements that are intended to guide solution providers from the problems to the sought capabilities. See "[Requirements Section](#)". Lorem ipsum dolor sit amet, consectetur adipiscing elit.
