

Food Transportation Gap Fill Essay

Today’s food travels thousands of miles before it reaches customers.

Is this a positive or negative trend?

The simple point is that

has some clear benefits to

Studies have shown that

it would be preferable if

that needs to be considered is

This means that if

is a negative

I believe that

strongest argument against

further consideration is that

also has an impact on

good research to show that

In the modern world, we frequently no longer rely on food that has been grown locally, but we have become accustomed to buying produce from all over the world. While this trend _____ consumers, I would argue that overall transporting food over long distances _____.

The _____ importing food is environmental. _____ transport and the use of fossil fuels is one of the leading causes of global warming and climate change. _____ we want to lead a greener lifestyle, we should be trying to minimise transport and this includes the unnecessary transport of foodstuffs.

Another point _____ the impact of transporting food on local farmers and traditional ways of life. Again, there is _____ farmers and smallholders are unable to compete in price with the supermarkets that import cheap, and often low-quality, produce from abroad. This is not just a problem for local farmers who are likely to go out of business, it _____ weakening traditional communities that rely on those farms for employment and trade.

A _____ food that has travelled across the world is considerably less healthy than locally grown, fresh produce. _____ the further food travels before it reaches the consumer, the less fresh it will be and any nutritionist will confirm that fresh food is fuller of vitamins. Therefore, _____ supermarkets and other stores did not transport food from other countries.

In conclusion, _____ the trend for transporting food over long distances is undesirable because it is environmentally unfriendly, threatens local communities and results in less healthy options for the consumer.
