Outdoor Observations

Introduction:

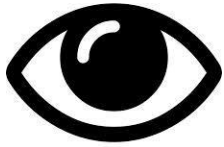

A scientific study is not confined to the laboratory. You can learn a great deal about the world around you just by sitting outdoors and observing the scene with all your senses.

For this activity you will need to choose a comfortable space outdoors. Make sure you are not sitting too close to other people. Take a minute to empty your head. You are here to observe your natural surroundings.

Steps:

1.) You should spend about 10 minutes sitting quietly and making observations, both **quantitative** and **qualitative**, about your space.

2.) Record your observations on the next pages. (At least 3 for each category)
