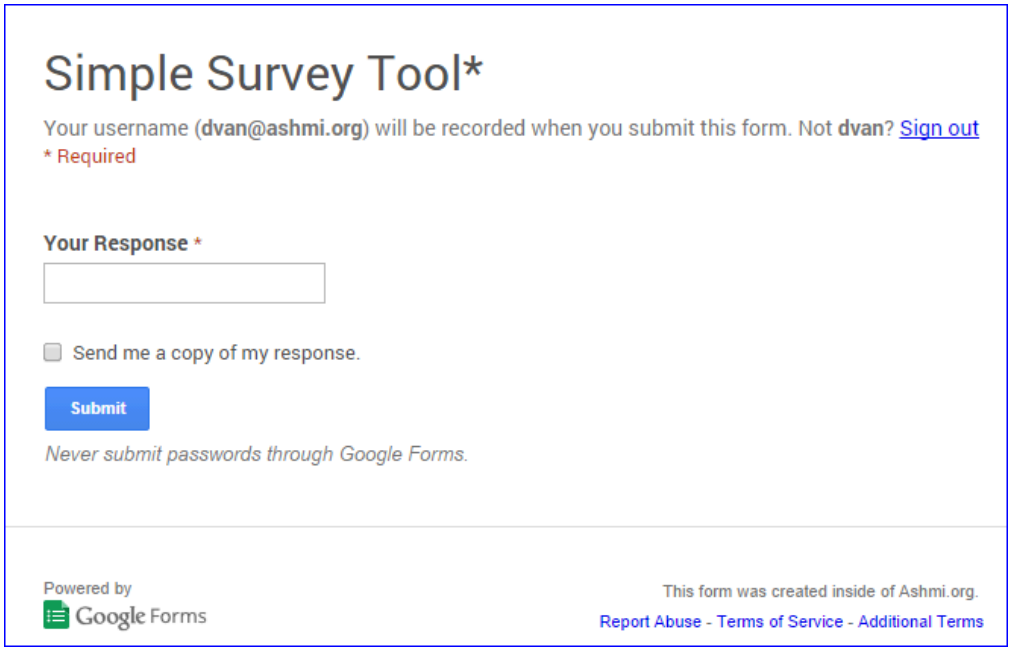
Dino's Flexible Audience Response System

tinyurl.com/dvan88

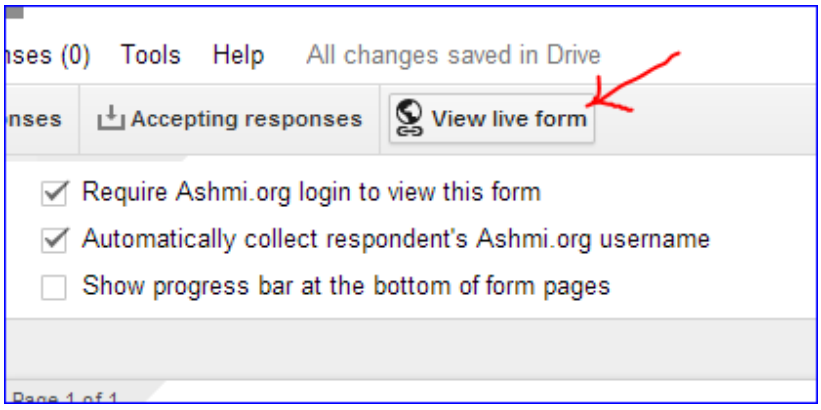
The above link is to my **Simple Survey Tool**. It takes you to the screen below. It only asks for a response and no name as I require the ashmi.org domain to view it and collect ashmi.org usernames when people submit the form. If you are dealing with people outside of ashmi.org, you will need a form that asks for names too.



The link that I created to this form (tinyurl.com/dvan88) can be written on a board or projected. No need to send a long link via email. (Although you could email the link or place it on a class web site.) People can use a computer or even a smartphone to access this simple survey tool.

How to Make Your Own

You can make your own **Simple Survey Tool** by first creating a “Google Form” like the one above and then copying the the long URL after you “View Live Form.”



Input the long URL at www.tinyurl.com as shown below and then pick a custom alias to make your link even easier for people to input. I choose a variation of my login name.

The resulting link will be easy for your audience to input.

To display data from my audience response system, I just need to open my form from my Google Drive. This is my link to the data that is collected by the form: https://docs.google.com/spreadsheet/ccc?key=0Ahlk8Mdwbq6QdExQSElqdmJJckZscGZNckpNaU4xZnc&usp=sharing

You could even create a short link for the spreadsheet to make it easy for you to get to.

The idea is that you use this same form, over and over again; deleting the previous data on the spreadsheet right before you use it again.

Notes:

- If you want to clear data from your spreadsheet, you need to **delete** rows of data as opposed to deleting individual cells.
- You can restrict the type of data entered! You need to do this on the spreadsheet with Data → Validation.
- You can ask for first and/or last names even though you are collecting email addresses.
- It's a good idea to **require** a response so that people don't submit a blank response by mistake.
- You can add more questions to your initial form or make a new form.
