

Hello and Happy Tuesday!

Have you been thinking about or are currently using one of the fancy new GLP-1 agonist drugs like Ozempic, Wegovy, etc...?

If so, I strongly recommend you [watch this interview](#) from a former pharma insider that is blowing the whistle on what these drugs can and are doing to people.

It's shocking!

No idea what I'm talking about?

These once a week injectable pharmaceuticals have been all the rage this past year.

They've truly taken the country (and many parts of the world) by storm.

Why you ask? Great question!

They work on a specific pathway in the body to help curb your hunger.

When you're not eating as much, the lbs can melt off.

Unfortunately, they also come with a black box warning, like -

- Stomach paralysis
- Gallstones
- Pancreatitis

Just to name a few...

That's the bad news.

Here's some good news.

If you're interested in shedding some serious lbs and want to get a head start on swimsuit season, I've discovered something that is a natural GLP-1 agonist that provides the same benefits of appetite suppression, without the nasty side effects.

This supplement is made from a very special and unique flower extract from an Island in the South Pacific.

The company has been around for 5 years, and has multiple clinical trials showing its safety and efficacy.

In fact, the supplement not only curbs your appetite in a big way, it can also help to improve your gut health.

Would you like to learn more?

Reply to this email and I'll make sure you're on the VIP list to get updates for when this supplement launches alongside our new program called - CRP - Circumference Reduction Protocol.

Talk to you soon!

Best,

Tim

PS. I've got some even more shocking info about the pharma GLP-1s that I'll be sharing tomorrow, like what it's actually made from. So keep your eyes peeled for my next email.
