Note: all info is what I found, more can be discovered, and red herrings can be found. (If there is incorrect info I'm sorry but I can say this is probably accurate.

Forest

How

The forest game is an escape room that uses the game hangman to make you discover secrets through a dark forest. Each room has an object and a bug, the bug is a glitched bug shape that puts you through a difficult puzzle. Finishing a corrupted balloon (or bug) puzzle reveals a corrupted balloon.

Answers

left level:search,sights
right level: monster, descend
corrupt right:myself, appear
Corrupt left:found,other
Corrupt 2 right:darkness, (VERY OBSCURE CORRUPT BALLOON LEFT SIDE MIDDLE ON A TREE), together
Corrupt 2 left:escape,become

Ending

 Left path
you:Who are you?
monster:This strange forest is something I once called home. yet when I descended further, I see things not as they seem. This forest is like not other; we cannot stay. There is no other solution. Do not fear me, I want to become your friend. Perhaps we can escape together.
you:I watch the strange creature float from view. Huh? What's happening to me?
Monster: My balloons are lifting me up! There is no more fear. Join me. *Fade to black*
Right path
You: Are they here? I don't- Woah! What's happening? The balloons are making me float away! I hope I can Find my from friends up here… I tried to *(Glitchy)* ==search== for them. I was afraid of a ==Monster== following me. Yet there was something I never ==found==. It's not just ==myself== here. There is another who hasn't found an ==escape==. Perhaps I need to trek back into the ==darkness==.
Button text: Find me?

Blog

A CoolmathGames employee discovered a mysterious document that cannot be sent because of a bug, this likely explains the wormhole in coolmath games earlier. He sees an encrypted message reading, "LET ME OUT" in the manilla folder

A readme file says

```
# Game Project

The Coolmath Games team is creating a single-player game involving a set of puzzles to get to one ending.

The game is currently in a BETA state and is not meant to be seen by members outside Coolmath Games.

# Installation
- Download latest build at —
- Use your keyboard
- Tap the keys
- A symbol is a number
- version 426-4626_@#!!##@@#@!!##

Bug reports to be submitted to

Copyright (c) 20xx Coolmath Games LLC

I cannot see beyond these $#@$@@@#$$$#.
I continue to !$!%$#!#!%##!$ darker and darker.
I have yet to find anyone #$$$@#!%$@ than me.
Can you hear me? Does this !!#%#%!%!!$@?
What has !@!%!##$#@!% of me?
I must find a way to escape. We can do this...$$#$@@!%$$@#!%$@.
```
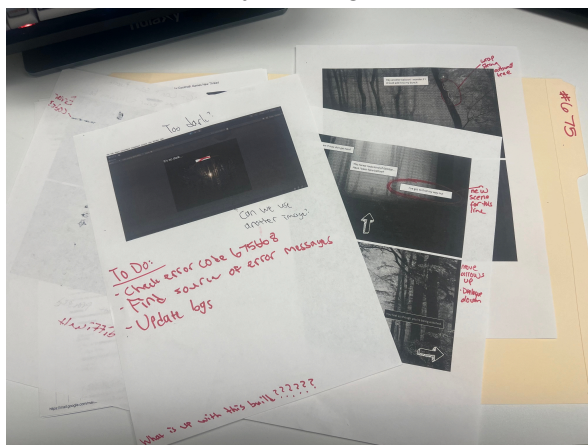

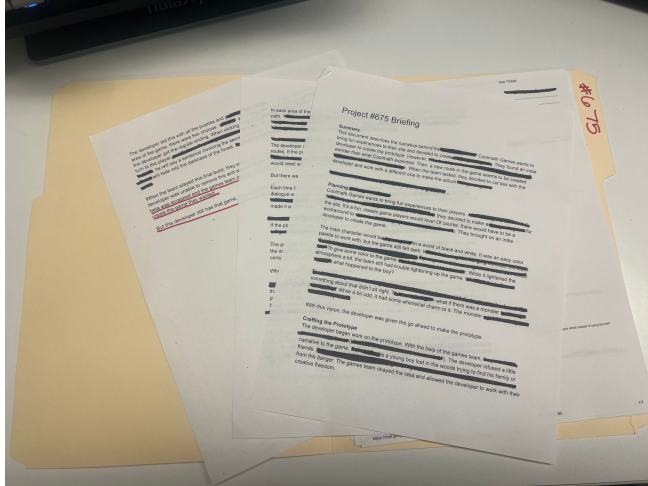

Social media drops (Twitter)

A block of code says, "Image not found" in a script

Nothing too spicy about this pic, most of it is already listed.

Nothing that isn't listed already about this either.

Wormhole

I sadly lost the info here but I found it on the cmg twitter.

"Hello? Can you hear me? I'm looking for someone. I hear strange noises. Please, help me." Page URL "I'M LOST"

Code cracking

In the readme blog image it says a symbol is a number.

(Note, I'm taking a break which means this won't be done for a little bit. However you can copy this and try to decode some of the symbols around this doc. If you could also report findings that would be cool.)
