

Run Contribution Rate (RCR) averages out how often players directly contribute to a run being scored. This includes both when said player scores, or when said player directly causes another player to score. Home runs are subtracted so that they are not counted twice in runs scored and RBIs. The final number is divided by plate appearances instead of at-bats so that sacrifice flies, RBI groundouts, etc. are included in the tally. This statistic determines a batter's value based on how much they directly contribute to a team's overall runs.

RCR places value in a few more areas, paying attention to run expectancy caused by the batter. That is quantified by $\Sigma\Delta RE_{PA}$, which is the run expectancy after the player's PA subtracted by the run expectancy prior to the player's PA, as well as $\Sigma\Delta RE_{BR}$, which is the run expectancy due to stolen bases or taking extra bases subtracted by getting caught stealing, picked off or running into an out. RE_{PA} can more readily be described as Run Value. RE_{BR} can more readily be described as Baserunning Run Value.

$$\frac{(R+RBI-HR+\Sigma\Delta RE_{PA}+\Sigma\Delta RE_{BR})}{PA}$$

*Player ranking is color coded: Yellow (1), Green (2), Teal (3), Red (4-10), Orange (11-25), Blue (26-50)

**All statistics are entering play on Monday, September 21, 2026 for the 2026 MLB season

RANKING	PLAYER	R	RBI	HR	PA	Run Value	Baserunning Run Value	RCR (Run Contribution Rate)
1	Pete Crow-Armstrong	118	107	45	702	51	7	0.339
2	Jake Bauers	90	83	26	552	29	3	0.324
