<div align="center">Teddy Bear Head Project Reflection</div>

I began by watching the video for the teddy bear head design while working alongside in Aspire. I used the modeling tools to help select my circles and make them come together as one piece in the teddy bear head. By naming all of the components, it was much simpler to keep track of what I had done and what I had not done. It was also very organized and helped me stay on track without losing my path of what I needed to work on to create the teddy bear head. I didn't make any mistakes throughout the process as the video was very detailed and helped answer all the questions I might have had with creating the teddy bear head. I learned that organization is key when it comes to creating something because it makes life much easier in the long run. For others who attempt this project, I suggest following the video guidelines as they are very helpful for beginners, or maybe even experienced users of the Aspire software.
