

Annotated Bibliography

- [The Tiny Life](#) - "Tiny Houses, Minimalism, Homesteading: Welcome." *The Tiny Life*, 8 Mar. 2021, thetinylife.com/.
 - This source is a website with a huge list of articles organized in a very simple way that will not have you lost. This is probably the largest source I used and had answers to most things in articles that explained it very well. They do the best job of going through the entire process and organizing it so you can read every single article and have a good understanding of most things. I used this source specifically for outlining the design process but came back to it for a wide variety of things.
- [Tiny house giant journey](#)- Jenna. "Female-Driven Alternative Living & Travel Blog." *Tiny House Giant Journey*, 3 July 2020, tinyhousegiantjourney.com/.
 - This source is a website + blog created by someone who lives in their own tiny home. They present much of the same information in a more simplified way as well as giving a large list of examples to explore and videos to connect, unlike other sources. She also includes a good list of separate sources. I used this source specifically for price breakdowns as well as the comparison between different kinds of products and their performance long term.
- [Tiny house bloom](#) - Ivan, and Manuela. "Tiny House Advice, Reviews and Tips." *Tiny House Bloom*, 17 Oct. 2019, tinyhousebloom.com/.
 - This source is very similar to the other but in my opinion the best one. It is also a website with a ton of organized blog posts that cover different ideas that will come up throughout the process. I found myself coming back to this source frequently to double check things and answer questions that appeared through the process. Although it may be hard to find the perfect blog post at times, the way they present the information is the best.
- <https://tinyhousecommunity.com/> - "Creating a More Sustainable Future Together " Tiny House Community." *Tiny House Community*, 20 Feb. 2021, tinyhousecommunity.com/.
 - This source is an expansive website full of blog posts that go over any question you could think of while building a Tiny Home. Along with this they give an expansive list of sources and example tiny homes. I used this source in many aspects of my project because of the detail they give and the straightforward manner of explaining things. Like the other sources this does a good job of consolidating information.
- [Tiny Nest Project](#) - Jake, and Kiva. "Jake & Kiva's Tiny House Resources." *Tiny Nest Project*, tinynestproject.com/.
 - The tiny nest project is a project taken on by a couple where they built a tiny house to be towed long term with the help of engineering and documented the process in extreme detail. Within there is a website with blog posts and resources as well as a very informational youtube/podcast series where they talk with an engineer and go over the purpose of everything in their tiny home. I used their youtube series and resources as my main inspiration as their design worked great for me and they gave great drawings throughout their process.
- [The Tiny Project](#) - "Tiny House On Wheels Plans & Tiny House Appliances." *The Tiny Project*, 6 Aug. 2020, tiny-project.com/.

- Similar to other sources this is a blog style website that includes an incredible amount of information and resources to answer a variety of questions. This one is made by a man who designed and built his own tiny home year ago and continues to be involved in the movement by providing information about his build and others as well as selling complete tiny house plans. I used this source because he includes a great list of other sources to be redirected to, but does so in a very organized manner that will save you time.
- [Tiny House Build](#) - “Tiny House Build Advice You Can Trust.” *Tiny House Build*, 10 May 2021, Tinyhousebuild.com/.
 - This source is the website of a program that allows you to buy premade plans for money and a course that leads you through building. Although I would suggest against paying money for this kind of thing this is the best place to do it and it may be the best if you are on a time crunch. I used this source for details around actually building the Tiny Home as well as using the 3d models on Sketch Up that they have linked. This source wasn't super valuable but is good to look at.
- [Tiny Home Industry Association](#) - “Appendix Q.” *Tiny Home Industry Association*, 20 Dec. 2020, tinyhomeindustryassociation.org/appendix-q/.
 - This source comes from the Tiny Home Industry Association, one of the largest Tiny Home Organizations that works with the government and coding around Tiny Homes as well as organizing the registration of new Tiny Homes legally. I used this source because this is the Association that created Appendix Q and worked to implement it and make it easier for Tiny Home Builders to build to code. This source was extremely valuable and went over their process of passing it as well as how you can talk to your local officials to pass it in your area if it isn't already.
- [ICC](#) - *2018 INTERNATIONAL RESIDENTIAL CODE (IRC) - CHAPTER 3*, codes.iccsafe.org/content/IRC2018/chapter-3-building-planning#IRC2018_Pt03_Ch03_SecR304.
 - This source is the legal code around Tiny Homes straight from the International Residential Code section of the International Code Council. I used this source to get the legal wording as well as confirm what I was told from other sources around dimensions you have to follow. This source also details what Appendix Q added to this, allowing me to see the before and after of what they accomplished. One limitation is that it took awhile to read through but was very valuable information.
- [Interior Dimension](#) - Dyer, Nicole. “64 Important Numbers Every Homeowner Should Know.” *This Old House*, This Old House, 18 Mar. 2014, www.thisoldhouse.com/21018212/64-important-numbers-every-homeowner-should-know.
 - This source is an article written with the hopes of giving homeowners 64 dimensions they should know. I used this source in order to understand the dimensions of various things that would be around the tiny home, specifically in how humans interact with the space in a comfortable way. I ended up using the great illustrations in my final slideshow in order for the viewer to easily understand what the space may look like.
- [Tiny House Roof](#) - “Options.” *Roofs for Tiny Homes*, 11 Jan. 2016, www.tinyhouserroof.com/options/.
 - This is a fairly short article on a website that covers everything you need to know about tiny home roofs. This source stood out to me because of the amount of detail they gave

when talking about specific materials and dimensions of them. I used this source to better understand roofs by knowing the pros and cons of each as well as ultimately deciding on materials. Although this source has good information it is very short and should be corroborated with others.

[Link](#) to slideshow: This is the (incomplete) slideshow where I go over how someone could go from a simple idea to a completed design of a Tiny Home. This also includes my design process and details around my final design.
