Emails Verifying Types of Fluoride Used in Shelby County Tennessee.

From: Lesa Byrum
Sent: Tuesday, May 31, 2016 11:49 AM
To: David Money
Subject: question about types of fluoride used at water treatment facilities

Good morning David,

I hope this email finds you doing well and having enjoyed a fun long weekend!

I have been charged with finding out what type of fluoride is being used to fluoridate water in some of the Shelby County water treatment facilities. Will it be best for me to call each one individually or is this something you may be able to assist me with?

Thank you,

TN Department of Health

Lesa,

We don't have the actual type of fluoride used in our databases. Each facility would need to be contacted. Is this a request by Mrs. Joyce Henderson?

Dr. Fairrow had asked me to get the information from each of the following utilities:
Memphis
Germantown
Millington
Collierville
Bartlett
Binghamton

Are you going to be getting this information on each of these?

Okay. Thank you for doing that….you moved through it quicker than I could have…I was just getting the numbers together.

Will you please copy Dr. Fairrow on the list when you send it?

Thank you David!

to btillman

My research shows Fluorosilicic acid was not used in Germantown TN Sothern Ave Water Treatment Plant until recent. Around 2013. Is this true?

Tillman, Bruce <btillman@germantown-tn.gov> Jun 8

to me

Ms. Henderson,

Here is the response from our Water Plant Supervisor. If you need any other specifics, please refer them to Mr. Sorensen.

thanks,

Bruce Tillman

To: "Tillman, Bruce" <btillman@germantown-tn.gov>

We have been using one form or another of Fluoride pretty much since the plant has been around. Specifically Fluorosilicic Acid since the plant renovation. which was around 2012.
