

Alexey Sukhodoyev's webinar talking points dated on 24 November

Webinar recording: https://youtu.be/DNT_bHprZi8

UST is now at a key stage of development. Every word we say has to be calibrated so as not to harm the company.

The UST technology has been certified in the UAE

[Source of the screenshot](#)

The certification means that the project has moved from being a venture capital project to an investment project. This, in turn, allows you to engage in targeted projects.

UST is a major engineering company that is not just creating technology, it is the origin of the emergence of a new technology platform. There will be created a whole universe of technologies.

The universe of technologies is a trend in which companies are being completely reformatted.

[Source of the screenshot](#)

As Hussain Al Mahmoudi says: "When you are at the startup stage, you go through a lot of challenges. There is no better and more feasible technology than the uSky project".

Anatoli Unitsky spoke at the GITEX exhibition in Dubai. The founder of UST talked about how industry can be brought into near space to preserve the environment on the planet Earth. This will be the next stage of development. All the technology to create the General Planetary Vehicle already exists. It is only a question of time, budget and team.

Recently, many delegations have visited the UST Testing and Certification Centre in Sharjah. Guests come to discuss specific issues. For example, the Ambassador of Rwanda (Africa) has recently visited the Centre.

[Source screenshot](#)

[Source screenshot](#)

The other recent visitors to the Centre were the delegation participants from the Kingdom of Lesotho, which is located at an altitude of about 1000 metres with difficult terrain. This country

is interested in building string transport. However, as we remember, one of the criteria for a targeted project is a minimum cost of \$20 million.

Look at how, with the development of the cryptocurrency industry, nations such as El Salvador have gained new opportunities for development. These countries will also use UST technology to boost economic growth.

Press conference for journalists at the UST Centre in Sharjah

[Source of the screenshot](#)

At this conference, Anatoli Unitsky answered questions about the financing of the project, among other things. As a result, he was able to further boost the company's reputation.

The picture below shows a unique operating system that functions inside the UST transport and infrastructure complex. This indicates security at the same serious level as, for example, in Apple's iOS operating system.

[Source of the screenshot](#)

If this is shown openly, it means that the whole thing has already been patented. The same will be true for targeted projects. If they announce some details, information about projects, it means that it cannot be changed.

Recently, there has been released [an article by Cleantechnica](#) that compared UST transport to Tesla. This company's cars were not able to solve the problems of traffic accidents, traffic jams, and emissions. Whereas UST has solutions to these problems.

Other articles:

[An article about UST freight transportation in the profile magazine "Innovative Transport"](#)

[An article of Construction Week edition about the company's development plan](#)

[An article in Whatson.ae](#)

[Zawya.com article about the UST's future plans](#)

Zawya edition wrote that UST, inc. plans to build a high-speed track by 2025 and plans to increase the number of potential targeted projects to 10 by the end of 2022. According to Anatoli Yunitsky, at least 3 contracts for targeted projects could be signed by the end of this year.

The media also reports that \$14 million has been invested in the design, construction and certification of transport in the UAE. In addition, one should not forget that the main headquarters of the company, as well as all the production and design facilities, are located in Belarus. New modes of transport are being created there for specific targeted projects, new types of tracks are being built, and everything that then appears in Sharjah is tested.

Funding is now needed for the high-speed transport, which will reach speeds of up to 500 km/h, as well as for research, demonstration and certification.

The integrated technology platform includes transport infrastructure, as well as solutions in energy generation and storage, IT and agriculture. All of these will probably also be combined with a blockchain direction.

The technology platform will require about \$580 million and an additional 50 hectares of land. The construction and certification of the transport and infrastructure complex will take 2 years from the start of full-scale financing of the project.

We are investing in the root technology, the company of which will co-own all targeted projects. Up to 20% of the profits will go to dividends or for further development.

What has recently Facebook done? Facebook is being transformed into a meta-universe and will absorb related areas of the industry. The same principle is being laid down in the company and the UST technology. It is better to position yourself as a technology platform in the beginning rather than spending huge budgets on new positioning.

Today, the blockchain industry is actively supporting **Facebook's meta-universe** direction. Even just by interacting with each other within the virtual universe, it will be possible to get perfectly tangible assets.

As for these UST technology platforms, the blockchain industry needs this to digitise space. As soon as this platform is implemented, completely new opportunities will open up today due to the use of utility tokens.

Do you remember how the American economy grew? It did so by building skyscrapers and developing infrastructure logistics and manufacturing. And with the fact that production can be moved into near space, combining and capitalizing all these areas in one corporation, it is possible to get a significant economic effect, which cannot be imagined now. I won't promise anything, but I know one thing - the potential is huge!

About what is going on inside SWC. We are undergoing a serious transformation; there is a division into separate sectors and sections, so that each employee understands his/her functions and knows their valuable end product.

In the near future, those who work in lead generation will have to fill out new reports, so that I, as the Head of the department, who also supervises lead generation and targeted advertising, can see who is the best by far, according to statistics.

We are doing all that to work and collaborate with the UST for decades. I sincerely hope we will be partners for years to come.

Very soon, there will be SWC conferences in Latin America and the Dominican Republic.

The re-certification and certification of top Speakers in more than 21 languages is now coming to an end, so that they only tell the true facts, including the rebranding of UST.

Forming a community of the best within SWC

There is a growing interest in "Top League". I remind you that only members of the "Top League" will have free access to training materials on SWC's adaptation and training platform.

At the beginning of 2022, we are planning to launch an adaptation and learning platform in several languages. Perhaps, this will become a SWC product in the future. We are positioning ourselves as a financial and social platform. SWC's biggest accumulated asset in 7 years is social capital. That's why the company is called Sky World Community.

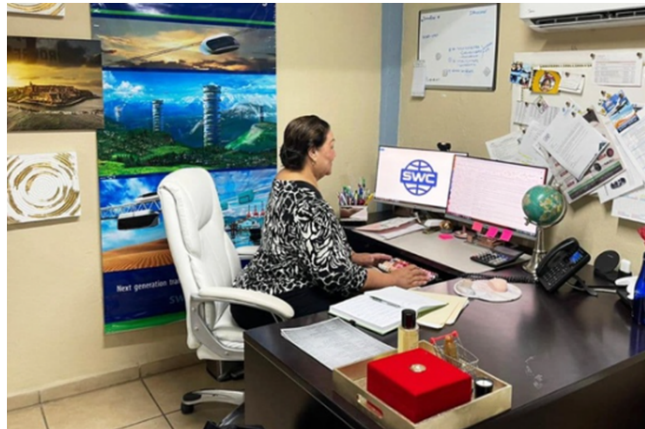

The participants of the "Top League" (RUS) will get:

- access to the following events;
- access to recordings of previous workshops, brainstorming sessions and events;
- unique bonus materials;
- opportunity for closed testing of the training platform and passing it before its official launch;
- priority conditions in recruiting candidates for new SWC positions;
- opportunity to promptly interact with the company's management;

- opportunity to go through an analysis of the situation with the experts of the "Top League" during the selection.

In the future, all this will be scaled to other languages than Russian when forming the system of international trainers.

SWC partners opened office in Puerto Rico

I think offices will open in the Dominican Republic and a number of Latin American countries in the near future.

I have recently held a teleconference in French for French-speaking partners. I think that in the future, we will introduce teleconference translations in more than 10 languages.

We are waiting for the official news and the results of the year from Anatoli Unitsky and UST CEO Nadezhda Kosareva personally.

Questions

Alexey, there are more and more publications about string transport in the press now. And how is the combat against "trolls" being conducted? What results have been achieved in this regard? The combat is very diplomatic. If these are publications that are very damaging to the reputation and could derail some projects, then, of course, there will be court proceedings.

A number of lawsuits have already been initiated due to the fact that the technology brand is being used without UST's approval. The best fight is proper positioning and correct answers from the founder.

Has the 130-km track already started being built or is it only being considered? As of now, the project is under approval from the responsible authorities in Sharjah, if we are talking about the Sharjah-Khor-Fakkan project.

How can we participate in protecting the company's reputation? We should watch again Vladimir Turman's webinars, keep an eye on what is going on in the media and add the information into a special reputation chat. But generally speaking, UST marketing is responsible for UST's reputation.

When will the construction of the 1st targeted project start? And how many years will it take to build? Given the information that the high speed direction will be built in 2 years, I think the targeted project will be built in about the same time frame.

How do you get into the "Top League"? If you have invested at least \$100 or more and have a development history, you should

1) Write to "Chat Keeper" Denis in Telegram **@kzkzkz78889** and send:

- Email (the one you have in your SWC account).

- Certificate of your status (or screenshot from personal office, where your status can be seen).

3) Denis will check the validity of the data through the statistics department.

4) When your data is verified, we will add you to the "Top League" chat.

When will there be news from Unitsky about the targeted projects? We are waiting until the end of the year.

About the tokens. The parent company has a lot of work to do for the tokens, but the potential is huge. A whole spectrum of the technology has now emerged that has been dormant until now, and other companies have not shown that they need such directions. And now Facebook is doing so in the logic of the meta-platform.

Are only the people with the knowledge of a minimum of two languages taken into the **"Top League"**? No, these are future trainers in the SWC Adaptation and Learning Platform should know at least two languages. Anyone who wants to act consciously and holistically in SWC product development can get into the "Top League".

I think that with sufficient funding the track will be built in 2-3 years. It's good to know that other targeted projects will be built in the meantime. I wonder when the first targeted project will start being built? The company is now preparing to scale, to create standards, regulations, policies, as all modern corporations do that.

And we too as SWC are working in a similar way. All our employees operate under rules, policies and standards. As a result, work has accelerated, many managers have been relieved, and SWC's overall result has improved. I speak taking SWC as an example, as I see it from the inside.

And at UST, it is all very easy to build up because Anatoli Unitsky has created more than one engineering enterprise. And the engineering enterprise is the foundation of the organisational structure on which all global corporations are built.

Thank you for your attention! See you soon in a fortnight! We create the future and fund it! Sky World Community!
