Nn NicrronNinoo

NicrronNinoo Columbia Hackathon

Participant guide and sponsor kit

Nicrron API (nicrron.ai) · Ninoo Builder (app.ninoo.ai) · Ninoo Code CLI (ninoo.ai) · nicrronninoo.ai

Your code: COLUMBIA26 — $250 in credits per participant, plus $10 for signing up ($260 total). Redeem by November 30, 2026, 11:59 PM ET.

Start on Nicrron: https://nicrron.ai/redeem?code=COLUMBIA26

Start on Ninoo: https://app.ninoo.ai/redeem?code=COLUMBIA26

One account works on every app, so either link is fine.

1. Get started in 5 minutes

One NicrronNinoo account signs you in everywhere: the Nicrron API, the Ninoo Builder and the Ninoo Code CLI. Your credits are shared across all three.

Step 1 · Create your account and get your credits

1. Open one of these links and click **Create an account** (the code is filled in for you):
   - Starting with the API: https://nicrron.ai/redeem?code=COLUMBIA26
   - Starting with the Builder: https://app.ninoo.ai/redeem?code=COLUMBIA26
2. Open the email **"Confirm your NicrronNinoo account"** from no-reply@ninoo.ai and click **Confirm email**. Not there after a minute? Check spam or promotions.
3. You're in, with **$260 of credit**: $10 for signing up plus $250 from COLUMBIA26.

Already have an account? Open either link, sign in, and click **Redeem**.

Step 2 · Pick how you want to build

Path A — Ninoo Builder: build a full app by describing it (about 3 minutes)

1. Go to https://app.ninoo.ai and sign in.
2. Describe your app in plain English. Ninoo writes the code and runs it in a live preview.
3. Keep chatting to change anything, then click **Publish** to get a public link at your-app.ninoo.app.
4. Have code already? Import a project from GitHub or a ZIP file.

Path B — Nicrron API: call 80+ AI models with one key (about 2 minutes)

1. Create an API key at https://nicrron.ai/dashboard/keys.
2. Use any OpenAI-compatible SDK and point it at Nicrron:

Python

```
# pip install openai
from openai import OpenAI

client = OpenAI(base_url="https://api.nicrron.ai/v1", api_key="YOUR_NICRRON_KEY")
reply = client.chat.completions.create(
```

```
    model="nicrron/auto",   # or "anthropic/claude-sonnet-5", "openai/gpt-5.5", ...
    messages=[{"role": "user", "content": "Hello, Columbia!"}],
)
print(reply.choices[0].message.content)
```

JavaScript / TypeScript

```
// npm install openai
import OpenAI from "openai";

const client = new OpenAI({
  baseURL: "https://api.nicrron.ai/v1",
  apiKey: process.env.NICRRON_API_KEY,
});
const reply = await client.chat.completions.create({
  model: "nicrron/auto",
  messages: [{ role: "user", content: "Hello, Columbia!" }],
});
console.log(reply.choices[0].message.content);
```

Choose a model	Model names
Let Nicrron pick for you	nicrron/auto, nicrron/reasoning, nicrron/coding, nicrron/fastest, nicrron/cheapest
Pick a specific model	anthropic/claude-opus-5, anthropic/claude-sonnet-5, openai/gpt-5.5, xai/grok-4.6, deepseek/deepseek-v4-flash, moonshot/kimi-k3, z-ai/glm-5.3, mistral/mistral-large-3
Images and video	google/nano-banana-pro, google/veo-3.1-fast
Try without code	Playground — chat with any model in your browser

Path C — Ninoo Code: an AI coding agent in your terminal

1. Install it (needs Node 20+; macOS or Linux, or WSL on Windows):

```
curl -fsSL https://ninoo.ai/install.sh | sh
```

2. Run `ninoo login` and approve in your browser.
3. Run `cd your-project && ninoo`, or give it a task directly: `ninoo "add a login page"`.

2. Promo code

Code	**COLUMBIA26**
Credit per participant	**$250**, plus the $10 everyone gets at sign-up = **$260**
Redeem by	**November 30, 2026, 11:59 PM ET**
Works on	Nicrron API, Ninoo Builder and Ninoo Code — one shared balance
Limits	Once per account
After redeeming	The credit never expires
Where to redeem	https://nicrron.ai/redeem?code=COLUMBIA26 or https://app.ninoo.ai/redeem?code=COLUMBIA26

How far it goes: a typical Builder message costs about $0.10 and a running Builder preview costs $0.01 a minute, so $260 covers many days of heavy building.

3. Docs, quickstarts and starter ideas

What	Link
API quickstart	https://nicrron.ai/docs/quickstart
API keys and authentication	https://nicrron.ai/docs/authentication

Ninoo Code download	https://ninoo.ai/download/

Starter ideas for the Builder

Paste one of these into app.ninoo.ai to get going:

- *"A study-group finder for Columbia classes, with sign-up and a map of meeting spots"*
- *"A dining-hall menu tracker with ratings and a "what's good today" page"*
- *"A chatbot that answers questions about my PDF lecture notes"*
- *"A club events board with RSVPs and a weekly email digest"*
- *"A portfolio site with a project gallery and a contact form"*

4. Branding for the sponsor section

Nn NicrronNinoo

One-line description

> **NicrronNinoo: one API for 80+ AI models (Nicrron) and an AI agent that builds and ships your app from a plain-English description (Ninoo), all on one account.**

Short version: NicrronNinoo: one API for every major AI model, plus an AI agent that builds your app.
