

Notes:

- so far, the application is available exclusively for iPhone users
- the recommendations are written so far only for a bicycle with 3 front gears and 8 rear gears
- for the test, you need a good phone holder for the bike

Here are **the instructions**:

1. Download "Expo Go" which is available in AppStore
2. Register an account in "Expo Go"
3. Provide us with the email address you used to register your Expo account (After some time, you will receive an invitation to our organization in Expo - Jaimelviv.)
4. Accept the invitation to be one of the first to try our app
5. Follow this [link](#)

A must read!

Be sure to calibrate on a perfectly flat surface - 0 degrees (first check with our built-in gyroscope that the bike is really standing on a 0 degree surface, and then fix the holder and do the calibration)
