

Plenary 4: **Looking Ahead**

Final evaluation [here](#). Quick request to complete those.

More card decks - we'll work with print shop at Clark College and online services can do to see what can be done and we'll communicate that to the community at large. Liz has requested some general numbers at [this page](#) so they can make the back-of-the-envelope calculations needed.

Remember to thank your CIO's for the rare opportunity for recharging, sharing, communicating, collaborating.

Action items:

- Continuing to finalize and develop our decks - Liz is sending out communication
- Joint faculty development opportunity - work we do with our faculty is so important
- Jane, Peter S, Lynn, will be sending out their communication about [what?]
- Erica: Crowd-sourced edtech problem solving. In the same way that the planning committee meets regularly, could we create a fixed time to look at a common problem or a particularly intractable problem. Needs an asynchronous component - a form maybe, where items are considered

Time to share: think about something you've seen in during the conference that you're hoping to try out, or something about the conference itself that you think could be improved upon.

- Peter Seaman: because the conference is tied to the CIO, concerned about the communications from CIO down to departments. Room poll: How many report to the CIO? About half. How many heard from the CIO about NWACC directly. A couple. Several anecdotes about very back-channel routes to getting to the conference.
- Erica: What's the summer session this year? The deck and faculty development process.
- Currently an invitational process, with an award that introduces elements of juried participation? Should we see changes?
