AI watchlist - Projects with token

AKT
Short summary: DePin / AI project allowing decentralized GPU rental. This project plays off the fact that NVIDIA can't make enough GPUs fast enough to keep up with the AI industry. AI needs GPUs to function

Coingecko: https://www.coingecko.com/en/coins/akash-network

enqAI
Short summary: Unrestricted AI with image/audio generation and large language models, powered by a decentralized GPU network for bias-free, agenda-free and censorship-free operations. The enqAI token is essential for the decentralized network powering Eridu and noiseGPT. Nodes earn rewards by processing AI model inferences, requiring staking of enqAI tokens to ensure commitment. Token holders can delegate their tokens to active nodes to participate indirectly and earn rewards. This system incentivizes participation, creating a self-sustaining AI ecosystem. The token is solely a utility for transactions within the ecosystem, with no expectations of profit or investment returns.

Blendr
Short summary: Blendr allows for the monetisation of idle GPU resources. So instead of straight up renting out your graphics card, you let the network make use of whatever you're not using at the time. This could be big for gamers with beefy setups to make money when they're not doing GPU intensive tasks. Key features include scalability, cost efficiency, and the novel use of $BLENDR tokens to facilitate transactions within the network.

Coingecko: https://www.coingecko.com/en/coins/blendr-network

Paal
Short summary: AI assistant for web3
Twitter: https://x.com/PaalMind
Coingecko: https://www.coingecko.com/it/monete/paal-ai

Dexguru
Short summary: Its Main purpose is to Be The "Middle Man" Between Business and smart contracts applications. Making it simple for regular people to deploy a smart contract the fits their needs
Twitter: https://x.com/xgurunetwork
Coingecko:

Morpheus
Short summary: Morpheus is a network for powering Smart Agents.The Smart Agent concept aims to connect large language models (LLMs) and AI Agents to wallets, decentralized applications (Dapps), and smart contracts, making Web3 accessible to everyone. Similar to how Google's search engine opened up the early internet to the public, interacting with a Smart Agent in everyday language can help users navigate the complexities of Web3. To ensure accessibility and decentralization, a network and token are proposed to incentivize key contributors: users, software developers, investors, and providers of computational resources.

BasedAI
Short summary: BasedAI is a network of computers that allows for secure, encrypted use of large language models (LLMs) without revealing any data. It uses a special method called "Cerberus Squeezing" that turns regular LLMs into encrypted models, called "ZK-LLMs", ensuring data privacy. This method helps miners (computers in the network) process questions and answers without needing to decrypt them.

Delysium
Short summary:Delysium leverages blockchain technology to create a secure, scalable, and high-speed communication network for AI agents, benefiting humanity by ensuring transparent and consensus-based governance. Using the YKILY Network (You Know I Love You Network), this network provides the financial infrastructure for AI agents to collaborate and conduct transactions seamlessly. The ecosystem is built on two main layers: the Communication Layer for basic interactions and the Blockchain Layer for enhanced security and transparency. This dynamic environment promotes innovation and interaction among diverse AI agents and users, addressing the need to manage growing AI tasks efficiently.

<p style="text-align: center; color: red;">**AI watchlist - Upcoming/tokenless**</p>

WayFinder
Short summary: WayFinder allows for highly customizable, user-owned, AI agents within the WayFinder ecosystem with a hive-like mind, meaning they all learn from each other's experiences. It basically lets you program an AI with a wallet which completes tasks for you autonomously. They plan to launch their token $PROMPT, subject to DAO voting, soon which will be used to pay fees for using the platform. Users will be able to create models / pathways & earn $PROMPT
Twitter: https://x.com/AIWayfinder

Coingecko: N/A
