

Student and Staff Landing Page Update

We hope you are enjoying the redesigned district website!

Right now, the MPS homepage is what you see when you load a web browser on a computer or Chromebook issued by MPS. As is the case for other school districts, our homepage—and the website in general—is designed primarily as a communication tool for MPS families and the community.

However, we understand that students and staff also rely on the district website for different purposes on a regular basis.

With this in mind, and in response to the valuable feedback we received after the launch of the new website, we will be changing the landing pages for our students and staff to better meet student and staff needs.

Beginning on Thursday, April 9, 2026, students and staff using district-issued devices (e.g., Chromebooks, laptops, desktops, and cell phones) that are connected to the MPS network will be directed to new locations.

The new student landing page will be: [Welcome, Students](#)

This page includes all the tools our students need for their daily classes.

The new staff landing page will be: [MPS Staff: Quick Links](#)

This page includes links to commonly used tools and resources for MPS staff.

Browsers opened on personal devices connected to the district network will continue to be directed to the [MPS homepage](#).

While small, this change will help our entire MPS community navigate the district website more efficiently and find the resources they need more quickly.

If you have questions or concerns, please complete a [District Web Request](#) form.
