

Linux KSP log

#without doing this the install won't even see that I have a hard drive in my box

#try Ubuntu without installing then

>sudo apt-get remove dmraid

double clicked install Ubuntu 15.04

selected install alongside Windows 7

ubuntu software updater update

reboot

system settings -> software and updates -> additional drivers

select using NVIDIA binary driver - version 352.21 from nvidia (open source)

apply

terminal

#needed to get steam to run

>rm ~/.local/share/Steam/ubuntu13_32/steam-runtime/i386/usr/i386-linux-gnu/libstdc++.so.6

install ksp via steam

set launch options for steam to the following:

LC_ALL=C with the LD_PRELOAD__GL_THREADED_OPTIMIZATIONS_64

#get compton window manager to deal with screen tearing issues

>sudo apt-add-repository ppa:xorg-edgers/ppa

#fix screen tearing

<http://steamcommunity.com/sharedfiles/filedetails/?id=274438424>

I get stuck here. I can't save the openbox autostart file: "Could not find the file
"/home/jeb/.config/openbox/autostart"

sudo mkdir ~/.config/openbox/

sudo touch ~/.config/openbox/autostart

sudo chown -R jeb ~/.config/openbox/
