1) ArcGIS Desktop to MS Excel and back

Exporting an attribute table from ArcGIS Desktop into MS Excel is easy:

1. Select whatever features you want in the attribute table.
2. If needed: open the attribute table.
3. Table Options...Export...
4. Select if you want to export the entire table (All records) or just the Selected Records.
5. Under Output table browse to wherever you want to save your new table. In this case use the \week8 folder.
6. Under Save as type: select Text File and click on Save.
7. Start MS Excel, select All Files, open the text file (*.csv) you just created, and save as MS Excel workbook.
