

Solar Schools:

New Incentives Make Now the Best Time to Go Solar

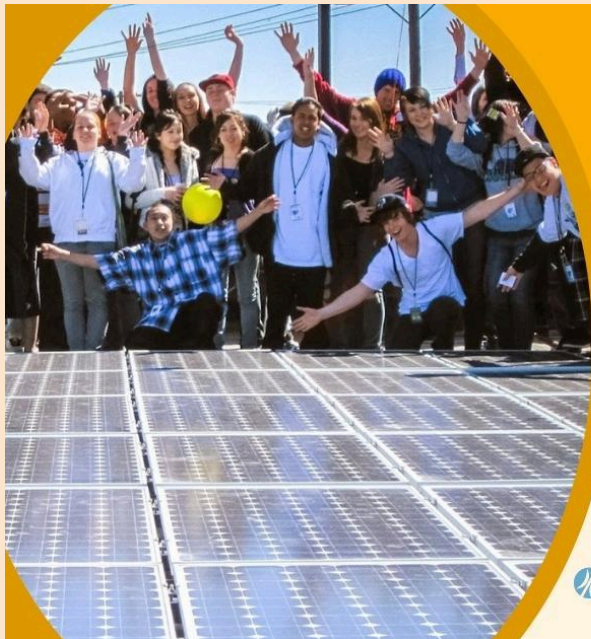

Thursday, May 4th, 2023 | 9:30 -11AM, via [Zoom](#)

The Inflation Reduction Act (IRA) provides unprecedented incentives to go solar. Learn how schools and environmental justice communities can access this funding and permanently reduce your electric bill!

Join Philadelphia Solar Energy Association and PHENND Sustainability for a preview of the Solar Schools Toolkit. The first in a series of three workshops, this timely webinar will provide an overview of the process for going solar, introduce a broad range of tools and technical assistance resources, and lay out a clear path to success. Solar industry and finance experts will demystify the new IRA incentives, review ownership and financing options and answer your questions directly.

By going solar, schools can save money every year, enhance student STEM education and career preparedness, and increase climate resilience. The PA Department of Environmental Protection (DEP) is sponsoring this Toolkit to make it easier than ever for schools to harness the many benefits of solar.
