

Skeever - Tutorial #3 - How to create a Custom Seat [2 hours to make]

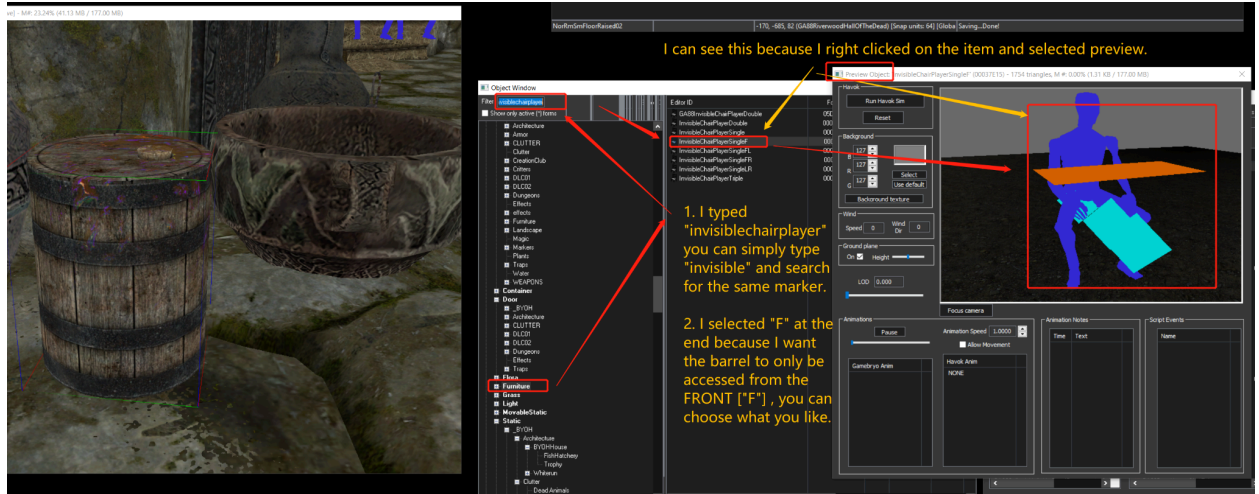

Thank you Ichirou for teaching me.
Enjoy :)

Double click on activator - 3D Data and for no reason change the rotation by adding a "1" at the end because I asked you to.

erspective] - M#: 23.24% (41.13 MB / 177.00 MB)

Cancel

Place marker on
Activator

You now have a working chair

Credits and notes

This document was created by Skeeever [I write my name not to promote myself, rather take responsibility if anything goes wrong]

Why this style of tutorial?

I believe this style saves time on videos and makes it possible for those special people who can not watch a lot of videos to learn how to accomplish certain things. I hope this is useful, I find it funny to make the player sit in strange places in the interiors I created.

As with all my tutorials, share this with anyone, this document is published on the web and is free for all to use.
