Abstrak

Abstrak harus memiliki konteks, isi, dan kesimpulan dari makalah dalam waktu kurang dari 150 kata. Abstrak tidak boleh melampirkan kutipan referensi atau menunjukkan persamaan. Jenis huruf dalam abstrak adalah 10 pt Times New Roman.

Abstract

The abstract must have context, content and conclusions of the paper in less than 150 words. In abstract should not enclose any reference citations or show equations. The typeset in the abstract is 10 pt Times New Roman.

This is an open access article under the [CC BY](#) license.

INTRODUCTION

Authors should ensure proper English grammar in their manuscripts. The use of abbreviations is prohibited. The introduction should provide a concise overview of the background, issues, and relevant facts related to the title, explaining the rationale behind selecting the topic. Some literature reviews may be incorporated in this section or elaborated later under major and sub-headings. The text must be formatted in 11-point Times New Roman with single line spacing. The manuscript should not exceed 7,000 words, including the abstract, keywords, main text, and references.

LITERATURE REVIEW

It is recommended to prioritize journal article citations over book-based references. Figures and tables can be included to enhance the text. The document should be formatted in 11-point Times New Roman. Sub-headings should be used to elaborate on topics related to the major headings. However, if no additional sub-headings are necessary, they can be omitted, and the text should proceed directly to the methodology section.

METHODS

Described all methods to be used in your research, it could be comparative or narrative to several case study works or life-long research projects. It could also be an experimental works. The methods must be consisted of all research step-by-step works to be done.

RESULTS AND DISCUSSION

1. Enclosed Items

2. Equations

Displayed equations should be numbered consecutively, with the number set flush right and enclosed in parentheses. The equation numbers should be consecutive within the contribution

Convergency tests are carried out to check if the measurement results of thermal conductivity and resistance ($t = 1,270$ minutes and time interval (n) = 60 minutes) result with an authentic value smaller than ($<$) 0.01; because there is no research references in pakis thermal conductivity and resistance values to be compared. The convergency factor (CR_1 , CR_2 , and so on) can be calculated by the equation:

$$CR_1 = (R_e(t) - R_e(t - 1)) / R_e(t) \quad \dots\dots\dots (1)$$

Where:

- CR_1 = convergency factor
- R_e = estimated thermal resistance
- t = measurement time

In order to get the R_e , thus the scientific calculation results with an equation:

$$R_e = \sum_{k=1}^M \Delta T_{sk} / \sum_{k=1}^M q_k \quad \dots\dots\dots (2)$$

Where:

- R_e = resistance values
- ΔT_{sk} = outer & inner surface temperature difference at k minutes
- q_k = heat flux flow at k minutes
- R_m = average resistance

Figures

Figures are to be inserted in the text nearest their first reference. Figure placements can be either top or bottom. Original media ink drawings of glossy prints are preferred. Please ensure that the figures are large enough to be clearly seen after reduction. If photographs are to be used, only color ones are acceptable. Figures are to be sequentially numbered in Arabic numerals that are according to the *chapter number*. Typeset in 10 pt Times New Roman. Previously published material must be accompanied by written permission from the author and publisher.

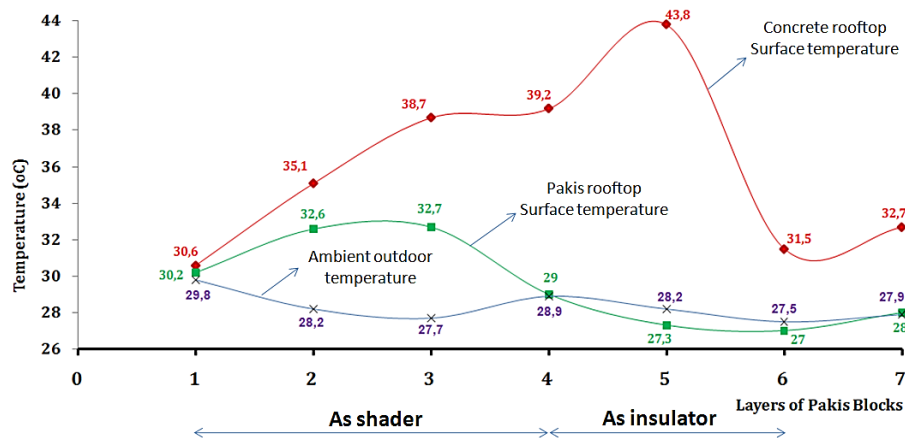

Fig. 1. Average Rooftop Surface Temperatures of Pakis's Layers on Built-up Model May-July 2011
(Source: author)

Tables

Tables could be inserted in the text format directly from Microsoft Excel or copy the table as jpg format and paste to the text body.

Table 2. Annual Solar Trajectory around the Building

	15 th Day of the Month at Noontime											
	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Altitude	61°	70°	79°	83°	76°	72°	74°	81°	81°	71°	62°	58°
Azimuth	171°	171°	155°	66°	30°	19°	17°	36°	117°	147°	158°	166°

CONCLUSION

It consists of your finding analysis and results. It could conclude some figures and tables to support your statements.

ACKNOWLEDGEMENT

This section should come before the References. Funding information may also be included here.

REFERENCES

The typeset in the abstract is 10 pt Times New Roman. The references section should be labeled “References” and should appear at the end of the paper. Authors should follow a consistent format for the reference entries. Dimensi subscribes to the reference formatting and the use of reference management software such as Mendeley, Zotero, or EndNote. Authors are encouraged to use the Mendeley Reference Manager and Citation Generator for in-text citations and bibliography. For journal names, use the standard abbreviations. A sample format is given on the references section below:

Citations in Text

Since the references are unnumbered, citations to them in the text must identify them by authors’ names and year of publication. References should be cited in text and giving the last name of the author and the date of publication. A comma should be present before the date; e.g. (1). For papers by two authors, the last names are joined by “and”. Papers by five and more authors should be cited by giving the last name of the first author followed by *et al.* and the date; e.g. (2).

Reference List

This format uses a numbering system, where each source cited in the text is numbered in the order in which it appears. The number is then used to refer to the bibliography at the end of the paper. In this format, the author's name is written with the last name first, followed by initials without full stops. If the source has more than six authors, only the first six are written, followed by ‘et al.’. Article titles are not written in quotation marks and only the first letter of the title is capitalised, while journal titles are written in abbreviated form according to standards. Each type of source, such as books, journal articles, or conference proceedings, has its own writing format. For sources written by the same author in the same year, it is distinguished by adding a lowercase letter after the year, such as 2021a and 2021b. The **Vancouver** format emphasises consistency. Each source is numbered as it appears, and the number is used in the text and bibliography. Author names are written with the last name followed by initials, without using conjunctions such as ‘and’ or ‘&’. If there are more than six authors, the first six names are written followed by ‘et al.’ Example of in-text citations : Research shows that the structure of web networks has a certain pattern (1).
