Inclusive Purpose Consent Query => Next steps. 2025-06-17

Now that the PCQ is ready for the recommended steps, what needs to be done.

1. Create a Demo (together with item 2?)
2. Work with Entidad on integration with their [Unmio onboarding app](#)
3. Work with W3C Digital Credentials Work group on integration of demo with PCQ
4. Show alignment with PEMC in Kantara to continue, show contrast with DCQL.
5. Present results of #3 to Wallet interop groups, like Open Wallet Foundation
6. Work with other Kantara members for adoption (AAMVA, Apple, Google)
7. Work with W3C Security Work Group on a Threat Model review
8. Get PCQ included in some Trust Registry work in progress.

Challenges:

1. Bullet point #3 above would provide an alternative to DCQL.
2. Purpose is required in regulations from GDPR to California CCPA & CPRA.
3. The OID4VP DCQL already has traction, but does *not* require a purpose

Data Credential Query Language (DCQL) is missing a clear purpose.
