

Dhumbal ScoreTracker Privacy Policy

Effective September 26, 2026

This policy explains how Dhumbal ScoreTracker for iPhone and iPad handles information. The app is provided by Jay Niraula. Core scorekeeping works offline, without an account. Your match records stay on your device unless you choose to share them or your device backs them up.

Information stored on your device

The app stores the player names or nicknames you enter, scores and score drafts, Dhumbal penalties, dealer positions, match settings, bet amounts, elimination order, calculated payouts, match history, dates, and the daily payout ledger. It also stores preferences such as sound settings. This information supports scorekeeping, resuming matches, corrections, and payout calculations. You may use nicknames instead of real names.

Information sent to the developer

The app does not automatically send your match records to us. It has no advertising or third-party analytics SDKs, and does not track you across apps or websites. We do not sell or rent your information. The app does not ask for an account, payment-card details, contacts, or location. Bet amounts and payouts are records only; the app does not process payments.

Camera and imported data

Camera access is optional and is used only to scan match-transfer QR codes. Scanning is processed on your device; the app does not save or upload camera photos or video. You can deny or revoke camera permission in device Settings and still enter scores, paste match data, or select a file to import. Clipboard data is read when you choose to paste; files are read when you select them for import.

Sharing a match

If you show a match QR code, copy game data, or use Share Data, the shared snapshot can include player names, scores, match settings, bet amounts, and payout information. Anyone who receives the data or scans the QR code may read and retain it. QR encoding and compression are not encryption. Share only with people you trust. Apps and services you choose through the share sheet handle the data under their own privacy policies. Handoff is a snapshot, not automatic synchronization.

Retention and your choices

Match history and ledger entries remain in the app without automatic expiry or count-based deletion. Local recovery copies help restore damaged saves. Starting a new match or resetting the current match does not erase earlier history.

To remove the app's local records and recovery copies, delete the app using Delete App in your device settings; offloading the app preserves its data. Exported files, copied data, recipient copies, and device backups must be managed separately. We cannot access or remotely delete records stored only on your device.

Device backups and Apple services

Depending on your settings, Apple or your computer may back up app data. Restoring a device backup may restore earlier records. Apple may also handle App Store information and diagnostic reports according to its own policies and your sharing settings. The app does not operate a developer-hosted cloud account or synchronization service.

Support email

If you email jaynir@gmail.com, we receive your email address, message, and any attachments or information you choose to send. We use this information to respond and resolve support requests. Email is handled by our email service provider. We retain correspondence only as needed for support, related follow-up, and any applicable legal obligations. You can request deletion of support correspondence at the same address; information that must legally be retained may be kept. Please avoid sending sensitive personal or financial information.

Security

The app uses local storage and recovery backups to reduce accidental loss. These measures do not guarantee that information cannot be lost or accessed. Protect your device with a passcode and keep its software updated. App deletion, device loss, damaged storage, or access by another person can affect your records.

Children

The app is not specifically directed to children under 13. We do not knowingly collect personal information from children through support communications. If you believe a child has sent personal information to us, contact us so we can address it and delete it where appropriate.

Policy changes and contact

We may update this policy when the app or its data practices change. The current policy will show its effective date. For privacy questions or requests concerning information you have sent us, contact Jay Niraula at jaynir@gmail.com.
