WELCOME to the Intro to Moving From Google Classroom to Canvas LMS Drip Workshop! This week's lesson is broken up into several activities that you can do a little at a time. My name is Marcia Carrillo, and I am a Google Classroom user that is now embracing the CANVAS LMS. I am excited to share my journey. Connect with me on Twitter @MCarrilloEDU and Instagram. This week in Central California, the average temperature is over 100 degrees. #staycool my friends!

Teachers Are Loving CanvasLMS

After leading the Premium *"Moving From Google Classroom To Canvas"* webinar, I received some feedback from my colleagues.

 "It's easier than I thought!" "This is so much fun!" "Canvas is intuitive!" "I'm so happy I get to use my G-Suite and Google Drive!" "I found an entire Drama course that I can edit!" "I wondered what to do with my AVID students and I found hundreds of resources!"

Welcome Video 2.0

What Is **Google Apps LTI** Integration With Canvas?

LTI stands for *Learning Tools Interoperability*. **LTI** provides a framework through which an LMS (**Canvas**) can send some verifiable information about a user to a third party, in this case ***Google Drive.*** You must authorize the **specific** Google Drive Account you want to access, whether you are creating assignments or students are submitting assignments. [Authorize "Services"In Canvas LMS 1.4](#) After creating a module, you will then create an assignment within that module, however if you are using a file from your Google Drive, you will need to select "external link" and then select the file. My journey continues to find more seamless and efficient ways to use G-Suite with Canvas,

First Activity - Creating A Course And Module

(I will be using the FREE Canvas LMS to model. I recommend you create a FREE

account using a personal gmail. If your district purchased Canvas, they will provide

log-on information and it will look different.)

Activity 2: Creating An Assignment With Video And Using Student View

Creating an assignment brings up a "rich text" editor with several options. Images, YouTube, inserting links, links to Canvas Commons and much more. Several menu boxes are available for points, peer review required, not graded vs. graded, due dates, and rubrics, if you choose. I suggest starting simple and assigning some points and a broad range for turning in assignments.

Activity 3: Creating An Assignment Using An "External Tool" (Google Drive)

Let's use some files from our Google Drive. First, make sure you have authorized access to the Google Account you desire to use. In the video I will demonstrate assigning collaborative Google Slides. Students will have "edit access" which will allow each student to add a slide to the presentation.

Bonus Activity: Embed A Google Form As An Assignment

In my journey I have watched several videos on how to use G-Suite with Canvas. Embedding a Google Form seems to be the best way to use a form, in Canvas. You CANNOT use the "external link" feature on a Google Form. Once the Google Form is created, you will need the ***embed code*** and then use the html format tool. Use the Canvas ***Assignment*** feature, to paste the embed code. Let's give this a try.
