

About Stratosphere Digital

We're a small, remote, full-stack digital agency specializing in designing and developing websites, web apps, mobile apps, and other custom software for clients around the world. In our work and life, we strive for quality over quantity: we care about selecting clients who are a good fit, taking the time to do things right, and giving ourselves the space to learn and grow from each other. We aim to operate with kindness, conscientiousness, and clear communication both within our team and with our clients. At the end of the day, we believe what's most important is always attempting to maintain a healthy work/life balance. Work should be a means by which we are able to live our best life, but it shouldn't be life itself.

Learn more about us at <https://stratosphere.digital>.

What We're Offering

- \$130,000-\$180,000 per year depending on experience
- 40 hours per week
- W2 employee
- 401(k)
- Health, dental, vision
- 16 days PTO + Holidays
- Fully remote. Work hours would be flexible, but you'd be expected to be available during normal business hours if something comes up.

Job Description

We're looking for a developer to write code on a variety of custom software projects. You'd work solo as well as in tandem with our developers and designers. You would need to be comfortable interacting with clients directly.

Some of the tools we frequently use: Slack, Linear, Figma, Toggl, Google Docs, and Notion.

Qualifications & Requirements

- At least 5 years of full-stack software development experience
- Proven experience leading the development of complex software applications
- Comfortable writing code for both web and mobile platforms
- Ability to interact with clients and communicate with non-technical stakeholders
- Good productivity with most the technologies below (though a willingness to learn and improve is what's most important)
 - JavaScript/TypeScript (React, Vue, ES6+, etc.)

- CSS3/Tailwind CSS
- HTML5
- Mobile apps (React Native, Java, Kotlin, Objective-C, Swift, Cordova, etc.)
- SQL/NoSQL
- API development (REST, GraphQL)
- Node.js
- PHP

Nice To Have Experience

- An engineering background with experience in any of the following:
 - Hardware/software integration
 - Hardware automation software (National Instruments or similar)
 - Flight software or flight simulation software (X-Plane or similar)
 - Robotics
- Experience with any of the following languages in a science/engineering application:
 - C/C++
 - C#, .NET
 - Python
 - Matlab/Simulink
- Blockchain Experience (Web3, NFTs, dAPPS, Smart Contracts, etc.)
- Cool personal projects or open source contributions

Interview process

We know interview processes are often cumbersome and obscured. So that you know what to expect, here are all the steps of our interview process. (Note that not all candidates will progress through all steps.)

1. Send your resume to the email below
2. Answer some written questions
3. Participate in a 1-hour technical coding interview
4. Participate in a 1-hour Q&A interview

To apply, email your resume to wesley@stratosphere.digital, with DEV-POSITION: [Your Name] in the subject line.
