

[Chronic wasting disease in Kansas deer](#) September 22, 2022

Dodge City Daily Globe

... Kansas's fish and game officials have been testing hunter-harvested Kansas deer since 1996, and during the 2005 firearms season, the first documented case was discovered in a whitetail doe taken near the Cheyenne Co. town of St. Francis, in the northwestern corner of the state ... during the 2021 – 2022 deer season, 190 new positive tests were confirmed, bring the total to 738 positive tests ...
