

# Continuous Governance, Improved Security Stance

Maintain a proactive security stance with round the clock watch on your cloud. Security Posture Governance enables you to apply a set of predefined security protocols and detect security loopholes with prompt notifications during any breaches.

## PAIN POINTS

- **Human Errors**

Manual security arrangements are prone to human errors, and vulnerabilities often pass undetected, causing major business losses.

- **Limited Cloud Expertise**

Organizations' cloud security expenditure and business needs are often misaligned because they lack the expertise to determine the best security arrangements for their use cases.

- **Security Ownership**

Cloud security is a shared responsibility, but organizations can quickly get overwhelmed by the sheer number of vulnerabilities, leaving them clueless on what and when to fix.

- **Regulatory Compliances**

Regulatory compliances are in a constant state of flux often leading to misalignment with organization's security posture.

# HIGHLIGHTS

- **Layered Approach**

We segregate all the resources in your cloud as per various security layers to ensure that the right set of security rules are applied to the right resources.

- **360° Security**

We customize our governance rules as per your business needs and focus on data encryption, access control and management, monitoring, etc. for 360° security of your cloud.

- **Network Security**

We focus on total network security by comprehensively auditing your network assets, minimizing any potential threats, and plugging any vulnerability points.

- **24x7 Alerts**

We provide 24x7 alerts to keep you informed about any potential vulnerabilities in your cloud infrastructure.

- **Compliance Management**

Continuous monitoring to ensure your cloud remains compliant with major regulatory standards such as GDPR, PCI, HIPAA, ISO 27001, etc.

“It is our pleasure to work with your esteemed organization and managing one of the critical Infrastructures of our organization. The support/CSM are top notch and we hope same services will be continued in near future. Nevertheless, [Centilytics'] Relationship Associate added more feathers to our journey with Single point of Contact for our concerns, feedbacks.

**Vikas Bhatt**

Deputy General Manager

“Centilytics provides valuable insights into our AWS infrastructure, we now have a granular visibility of our cloud spending. With service usage analytics, automated reports & alerts, and reserve instance planner, Centilytics is a must have platform for cloud cost management & governance.
