Figure 1 is a line graph showing the relationship between the number of days of exposure to a 12-hour shift and the number of days of exposure to a 12-hour shift. The x-axis is labeled "Days of exposure to 12-hour shift" and ranges from 0 to 10. The y-axis is labeled "Days of exposure to 12-hour shift" and ranges from 0 to 10. A solid line represents the 1:1 relationship. A dashed line represents the 2:1 relationship. Data points are plotted for each day of exposure, showing a clear upward trend.

Figure 1. The relationship between the number of species and the number of individuals in a community. The x-axis represents the number of individuals (log scale) and the y-axis represents the number of species (log scale). The curve shows a positive relationship between the two variables.

Figure 1. The effect of the concentration of the solution on the adsorption of the dye. Figure 1. A schematic diagram of the experimental design. The diagram shows a sequence of events: a subject is presented with a stimulus (a word or picture), then a response is recorded (a button press or verbal response), and finally a feedback is provided (a tone or light). The sequence is repeated for multiple trials.
