

FOR IMMEDIATE RELEASE

Advance Lifts Highlights the Lift & Turn (PM) and (PP) Series Scissor Lifts

Optimized Lift and Turn Units for Independent Lifting and Rotating Functions

Advance Lifts, a leading North American manufacturer of industrial scissor lift tables and dock lifts, highlights its Lift & Turn (PM) and (PP) Series scissor lifts, engineered for applications where lifting and turning must be performed independently. These rugged and versatile units are designed to improve ergonomics, enhance safety, and increase productivity across a wide range of industrial settings.

The Lift & Turn Series features Advance Lifts' patented Platform Centering Devices, which double or triple the life of the equipment by maintaining platform alignment under load. Each unit is powered by a single internally mounted power unit for a streamlined and compact design. Safety and reliability are integral to every model, with Underwriter Laboratory listed assemblies, machine-grade hydraulic cylinders, and double wire braid pressure hoses with JIC fittings included as standard. Units are fully primed and finished with a baked enamel coating to provide lasting durability in demanding environments.

The PM model offers a manual turntable for applications where powered rotation is unnecessary, providing a cost-effective solution without sacrificing performance. The PP model features powered rotation for smooth and precise turning that enhances ergonomics and operator control. An optional foot control allows for hands-free operation, further improving workflow efficiency.

All models come with a one-year parts and labor warranty and are backed by an extended structural warranty of ten years or 250,000 cycles. These features make the Lift & Turn Series an ideal solution for industries requiring durable and efficient material handling equipment, including food processing, material handling, automotive, manufacturing, industrial operations, warehouses, aerospace manufacturing, fabricating and metalworking, large scale printing, and paint applications.

###

About Advance Lifts

Established in 1974, Advance Lifts specializes in providing lifts for loading and unloading semis, as well as ergonomically positioning work for line workers and adjusting product heights within manufacturing lines. The largest dock lift manufacturer in North America, Advance Lifts operates from a state-of-the-art 120,000 square foot facility in St. Charles, Illinois.

Dedicated to delivering top-quality products, including industrial scissor lift tables, industrial turntables, container tilters, container dumpers, work access lifts, powered lifts, multistage lifts, and reciprocating conveyors, Advance Lifts offers the most extensive and finest warranties in each of these categories.
