## Adaptive learner Draft

Thesis: Throughout my junior year I was able to learn to be adaptive by learning new things and learning how to change ideas and be used to creating more ideas because of it. My experience of learning how to be an adaptive learner was working in teams to provide information to my teammates so that they can adapt to the situation and get a closer insight into what is happening in the event. for example, in the quarter 3 history project and have to find a solution to a big event and change the course of history according to the solution we have the project shows being adaptive because we have to understand other people's points and views and see how the environment was functioning during that period also we need to understand how it could change the course of history and if it would work or not. Another example of me being an adaptive learner throughout the year was doing certain projects that require us to think more and have a deeper insight and getting us to understand how this affects society and how we can change it. These projects could also tie into problem-solving but you have to understand the other person's point of view and adapt to their lifestyle and the environment or problems regarding it.

**AP seminar: TMP for solving a big world problem Presentation/Solutions:** For this project, we as a team in the AP seminar had to find a solution based on ethical, futuristic, information from articles, and text. because my team has to go more in-depth about the situation of ocean pollution in other countries and adapt to their situation and put ourselves in their shoes also we have to find the problems to the water and reduce the number of death by humans/marine life, by doing this we had to find certain resources and information that could prove that this is a problem and adapting to fix the problem in certain ways. **Physics: Artemis bubble expansion project:** For this project, I had to find the points of view of the people of Artemis and find a better alternative living space for them by creating a whole environment that has a lot more space and more resources so that they could be more sustainable and live longer. This also supports my thesis because I had to adapt to the people of Artemis themselves and study their personalities so that I could add some personality to the bubble colony. **US Humanities: Quarter 3 history project solution:** For this project, we as the team had the change the course using the

information given to us by the authors of different websites and just finding information, in general, to support our idea change so by doing this we as the team had to find what was causing the event to happen and how we can adapt to the event and the people to find the solution overall. **Incubator Defense: Financial model incubator:** For this project, we as the team need to come up with ideas to prove that our financials are correct and adapt more to other businesses and see what we can improve or change from their business and just go more into the lives into our customers and thinking about what they would like and gaining the feedbacks.

**Adaptive learner Final response:** Being an adaptive learner is a good way of finding out to dig deeper into a problem and putting yourself into other people's shoes and situations. Being an adaptive learner means gathering information and using it for certain situations that could help you or someone else to come up with new ideas and solve real-world problems and learn new information to conclude something. Many people have to use adaptive learning to solve multiple problems or maybe just use adaptive learning in general for certain things and sometimes they can change really important things to make them better than before.
