V-Carve Project Reflection

For this project, I created the MasterCard logo in Aspire and used the basics of Aspire to create shapes and text on a flat surface. Creating the MasterCard logo did come with some challenges since I was not able to watch a video step by step to learn how to create it. However, I was able to use some basic tools, such as the circle tool, to create the MasterCard logo. It was interesting to see how you can weld together certain pieces to create one piece so that it looks much smoother when cutting it out. I learned that from this project I was improving my Aspire software skill set for future projects. Others attempting this project, I recommend creating something that you enjoy or maybe a brand you like. The project is very fun and I recommend that everyone gives it a shot.
